QUESTION 1

What can an optional PCI-x Card slot be used for on an EMC Data Domain system?

- A. 1 GbE, 10 GbE, HBA VTL, SAS HBA only
- B. 1 GbE, 10 GbE, SAS HBA only
- C. 1 GbE and SAS HBA only
- D. 1 GbE, 10 GbE, HBA VTL only

Correct Answer: A

QUESTION 2

What is a component of Data Domain Data Invulnerability Architecture that protects against data loss?

- A. Encryption
- B. System sanitization
- C. File system recovery
- D. Snapshots

Correct Answer: C

QUESTION 3

A customer implemented an EMC Data Domain system in a Microsoft Windows environment two months ago.

The Data Domain system was added to the Active Directory domain and backups ran normally until now.

The backup administrator is trying to access the CIFS share on the Data Domain system from the Windows storage node and is getting an access denied message.

What is a possible cause?

- A. Privileges for the user account used by the Data Domain system were removed
- B. Time difference between the Data Domain system and the Active Directory server is less than two minutes
- C. Replication services on the Data Domain system are stopped
- D. Cleaning activities have been pending on the Data Domain system for more than one week

Correct Answer: A

QUESTION 4

An EMC Data Domain customer has setup a DD VTL for their backup software. They created slots, drives, and tapes. The backup software shows the tape drives and the robot, but not the tapes.

Which step was missed on the Data Domain system?

- A. Import the virtual tapes in the VTL
- B. Configure Fibre Channel LUN masking
- C. Tape labels are not defined
- D. Incorrect media type is defined

Correct Answer: A

QUESTION 5

An EMC Data Domain system has been installed at a customer's site for several months and has reached steady state.

At which threshold percent does capacity reach the point where action should be taken to make more free space available?

- A. 75
- B. 85
- C. 90
- D. 95

Correct Answer: B
