QUESTION 1

Which method of deduplication yields better deduplication results for multiple data types?

A. Variable segment size due to its ability to split the data stream into segments

B. Variable segment size due to its ability to add data to a variable segment and move the data stream

C. Fixed segment-based due to its ability to allow sub-file chunking of data

D. Fixed segment size due to its ability to add data to a fixed segment and move the data stream

Correct Answer: A

QUESTION 2

An EMC Data Domain customer is looking for a way to charge each company department for storage utilization on their Data Domain systems. How can this be implemented in Data Domain?

A. Create an MTree for each department with soft and hard quotas

B. Create a restricted data zone for each department

C. Configure an administrative file system for each department

D. Add a controller for each department to each Data Domain system

Correct Answer: A

QUESTION 3

A customer is implementing an EMC Data Domain system over CIFS using EMC NetWorker. How would the Data Domain system be configured on the backup server?

A. Storage unit

B. adv_file device

C. Jukebox

D. Backup-to-disk folder

Correct Answer: B

QUESTION 4

A customer has configured an MTree (/data/col1/departments) on an EMC Data Domain system with two subdirectories configured as Sales and HR. They want to configure replication to replicate only the Sales subdirectory to another Data Domain system. In addition, they do not want to replicate the HR subdirectory.

How can this be accomplished?

A. Move the Sales subdirectory to its own MTree

B. Take a snapshot of the Sales subdirectory and replicate the snapshot

C. Configure directory replication for the subdirectory /data/col1/departments/Sales

D. Perform a fast copy of the subdirectory /data/col1/departments/Sales and replicate the copy

Correct Answer: A

QUESTION 5

Which benefit is provided by EMC Data Domain Stream-Informed Segment Layout (SISL) scaling architecture?

A. Deduplication of data inline which eliminates the need to write duplicate data to disk

B. Ability to quickly deduplicate data previously stored on the Data Domain system which allows faster ingest of data

C. Ability to verify the data stored in the Data Domain file system for reliability

D. Ability to transparently and automatically recover from disk read errors using RAID parity

Correct Answer: A
