QUESTION 1

According to EMC best practices, how should reports be displayed to end users based on a user's group?

- A. Create different applications for different users.
- B. Create reports for different users with different filters and create different dashboards for different users.
- C. Set the permissions on the report template to dm_bam_group.
- D. Use the @default-group@ filter variable.

Correct Answer: D

QUESTION 2

How does a business process that uses asynchronous communication relate back to the original message?

- A. correlation sets
- B. triggered events
- C. unique r_object_id of the data package
- D. JSESSIONID set by initial message of the Java Method Server

Correct Answer: A

QUESTION 3

An application developer is deploying an xCP application in which process activities contain references to specific performers.

According to EMC best practices, what should the application developer do to create installation parameters for the performers in the Composer project?

- A. Reference performers as process parameters.
- B. Manually update activity performer assignments.
- C. Update them after deployment using Process Builder.
- D. Use the BPM data mapper to map a process variable to the performer name.

Correct Answer: A

QUESTION 4

A Process Data Mapping activity that is configured to be performed on behalf of the Workflow Supervisor assigns a

value to an attribute of a package in a workflow. The activity fails to execute, and the resulting error implies the user has insufficient permissions to execute the required action.

According to EMC best practices, how should this issue be resolved?

- A. Update the permissions of the user who started the workflow to grant them Superuser privilege.
- B. Modify the Access Control List that has been applied to the package, granting the user who started the workflow Write permit.
- C. Set the Performer of the activity to be another user who should have permission to update the package.
- D. Set the Performer of the activity to be the Repository Owner.

Correct Answer: D

QUESTION 5

An electronic form template is configured to store field values in repository attributes of a custom object type. A new attribute is added to the object type and a text field is added to the form.

What should be done to enable the new text field value to be stored in the new attribute?

- A. Change the data item name to the same name as the attribute.
- B. Re-generate the template from the object type.
- C. Use the Synchronize function in Forms Builder.
- D. Set the storage mapping.

Correct Answer: D
