QUESTION 1

When using Forms Builder, an application developer has two form templates sharing the same data model.

What type of change on one of the templates will invalidate the shared template?

- A. renaming the form template
- B. modifying the storage mapping
- C. renaming a data item
- D. renaming a UI control

Correct Answer: C

QUESTION 2

According to EMC best practices, how should reports be displayed to end users based on a user's group?

- A. Create different applications for different users.
- B. Create reports for different users with different filters and create different dashboards for different users.
- C. Set the permissions on the report template to dm_bam_group.
- D. Use the @default-group@ filter variable.

Correct Answer: D

QUESTION 3

There is a folder content template in a TaskSpace application. The application developer needs to display a double attribute as one of the columns that represents a credit score. Rather than showing the actual score from the repository, the application developer wants the display based on the following condition:

How should the application developer accomplish this?

- A. Create another attribute in the object type and use a TBO to store the display based on condition.
- B. Create another attribute in the object type and use a job to update the attribute with the value to display.
- C. Use a set value adaptor on the folder content template to resolve the display value.
- D. Configure a column in the folder content template with the conditional formatting.

Correct Answer: D

QUESTION 4
