QUESTION 1

A customer is trying to understand the relationship between file systems, VNX SnapSure checkpoints, bitmaps, and blockmaps. They want to know the number of bitmaps on a file system.

How many bitmaps are available per file system?

A. As many as there are checkpointed file systems

B. As many as there are checkpoints

C. One per 20 GiB of data

D. One for all file systems per VDM

Correct Answer: A

QUESTION 2

From Unisphere, a Storage Administrator created an NFS export and alerted a user that the exported file system was ready to be mounted. The user was able to access the export but was not able to write to the export.

Which step would likely resolve the issue?

A. Ensure the host IP is entered into the correct NFS export host table.

B. Ensure the server is rebooted after the NFS export is presented.

C. Ensure the NFS export is correctly identified and mounted.

D. Ensure firewall rules do not block access to the NFS export from the host.

Correct Answer: A

QUESTION 3

What is a primary capability of Data Protection Advisor (DPA)?

A. Suggest improvements to the replication environment

B. Quiesce DB2 and start a backup

C. Create and delete snapshots

D. Audit multipath count and status

Correct Answer: A

QUESTION 4

What monitoring option is used to generate file-related notifications based on a user-defined threshold?

A. Notification Logs for File

B. Background Tasks for File

C. Event Logs for File

D. Statistics for File

Correct Answer: A

QUESTION 5

You have just completed expanding a 20 GB LUN to a 40 GB stripe metaLUN for a Windows 2003 system.

What Windows tool needs to be run to allow the host system to use the new allocated space?

A. diskpar

B. diskpart

C. format

D. chkdsk

Correct Answer: B
