QUESTION 1

An EMC customer is implementing an EMC Disk Library (EDL) as the primary target for backups using NetBackup. After a predefined period of time, data needs to be moved from the EDL to physical tape. Data movement to physical tape and

recovery from physical tape should occur without manual intervention.

Which feature satisfies these requirements?

- A. Path-to-Tape
- B. Remote Copy
- C. Consolidated Media Management
- D. Auto Archive

Correct Answer: D

EMC Education Services EMC²
where information lives™

Auto Archive

- Copies or moves virtual tape contents to physical tape
- Physical and virtual barcodes must match
- Same drive type
- Operation is not controlled by the backup software

The diagram illustrates the Auto Archive process. On the left, a group of 'SAN Clients' (represented by server icons) is connected to a cloud labeled 'SAN'. This cloud is connected to a central server rack. The server rack is connected to another cloud labeled 'SAN', which is then connected to a physical tape drive on the right. An orange arrow points from the second SAN cloud to the tape drive, indicating the data movement.

QUESTION 2

A host has a file system with files changing every day. Full backups are performed every Sunday. The backup window during weekdays is limited. Full file system recovery should be accomplished in the shortest amount of time. Which type of backup should be performed every weekday to meet these requirements?

- A. Raw
- B. Block level
- C. Differential
- D. Incremental

Correct Answer: C

QUESTION 3

What is an advantage of using MTrees in an EMC Data Domain system?

- A. Allows for management of compression rates separately
- B. Increases the deduplication ratio within the system
- C. Improves replication performance
- D. Segregates management and replication traffic

Correct Answer: A

QUESTION 4

Which Avamar node is dedicated to providing internal Avamar server processes and services?

- A. Spare
- B. Storage
- C. Utility
- D. Accelerator

Correct Answer: C

QUESTION 5

A customer is planning to implement an EMC Disk Library with Active Engine Failover in their switched fabric environment. What is a requirement?

- A. Redundant target WWNs
- B. NPIV support on the switch

C. Spoofed WWNs for all initiators

D. Minimum of two GigE ports configured for LACP

Correct Answer: A
