### QUESTION 1

DRAG DROP

What is the correct sequence of events in a scheduled backup workflow using Dell EMC NetWorker Module for Databases and Applications (NMDA)?

Select and Place:

#### Answer Area

- savegrp program requests client side nsrexecd to run the savefs program and then sends information back to the savegrp program
- nsrdasv contacts nsrd for authentication and then sends backup data to the NetWorker device
- savegrp program contacts the nsrexecd service to start the nsrdasv program
- Tracking information is recorded in the NetWorker media database and CFI
- nsrd starts the configured group's backup by invoking the savegrp program

- STEP 1
- STEP 2
- STEP 3
- STEP 4
- STEP 5

Correct Answer:

**Answer Area**  
  
  
  

savegrp program contacts the nsrexecd service to start the nsrdasv program

savegrp program requests client side nsrexecd to run the savefs program and then sends information back to the savegrp program

nsrdasv contacts nsrd for authentication and then sends backup data to the NetWorker device

nsrd starts the configured group's backup by invoking the savegrp program

Tracking information is recorded in the NetWorker media database and CFI

**QUESTION 2**

What is a characteristic of an EMC NetWorker synthetic full back up?

- A. A full back up or a synthetic full backup must exist
- B. Synthetic full backups must be directed to Data Domain devices
- C. All save sets participating in the synthetic full backup must be in the same pool
- D. A full backup must be run after every 20 synthetic full operations

Correct Answer: A

**QUESTION 3**

An EMC NetWorker administrator needs to recover a client file index.

What needs to be executed in order to retrieve this information?

- A. nsrck -L7 (client name)
- B. nsrck -L -t nsr\_getdate
- C. nsrck -I -T nsr\_getdate

D. nsrck -l7 (client name)

Correct Answer: A

---

#### QUESTION 4

Which EMC NetWorker host can belong to multiple data zones?

- A. Client
- B. Storage Node
- C. Server
- D. Remote Storage Node

Correct Answer: A

---

#### QUESTION 5

An EMC NetWorker server has one advanced file type device and a library with four tape drives. Two tape drives are dynamically shared with a NetWorker storage node. One of these shared drives has failed and is now disabled.

By default, how many nsrmmd processes are now running on the NetWorker server?

- B. 5
- C. 6
- D. 7

Correct Answer: D
