### QUESTION 1

What is a benefit of the EMC NetWorker remote device support feature?

- A. Distributes the backup workload throughout a data zone
- B. Sends backup data directly to the backup device, bypassing the storage node
- C. Isolates groups of clients from other clients in the data zone
- D. Reduces the capacity requirements for backup storage

Correct Answer: A

---

### QUESTION 2

A backup administrator has configured a new library using the EMC NetWorker Management Console on an existing storage node. They notice that the library does not show ready in the NMC. Before running backups to the new library, the administrator wants to ensure the process that controls the library is running.

Which process should the administrator look for on the storage node?

- A. nsrlcpd
- B. nsrsnmd
- C. nsrexeed
- D. nsrmmd

Correct Answer: A

---

### QUESTION 3

When Dell EMC NetWorker is integrated with a Data Domain system with DD Boost, what analyzes the data stored on the Data Domain and sends only the unique data for storage?

- A. Storage Node Process
- B. Dynamic Parallel Save Streams
- C. Distributed Segment Processing
- D. Deduplication Node

Correct Answer: D

NetWorker integrates with Dell EMC Data Domain Boost--a software option that extends the capabilities of Data Domain solutions--to significantly increase performance and simplify management. With DD Boost the deduplication process is distributed to the NetWorker client, storage node or application host, enabling each to send only unique data segments to a Data Domain system.

#### QUESTION 4

Which EMC NetWorker feature provides the ability to back up an individual tablespace of a database?

- A. Granular backup
- B. Parallelism
- C. Online backup
- D. Client Direct

Correct Answer: A

---

#### QUESTION 5

During a scheduled backup, what would EMC NetWorker do if a save set does not explicitly match any pool?

- A. EMC NetWorker sends the save stream to a volume in the Default pool.
- B. EMC NetWorker sends the save stream to a volume in the Backup Clone pool.
- C. EMC NetWorker aborts the backup.
- D. EMC NetWorker aborts the backup and disables the Group.

Correct Answer: A
