**QUESTION 1**

What happens when files fail to find a match in the file cache during a backup of an EMC Avamar client computer?

A. An "is present" call to the Avamar server

B. Fewer chunks are compressed

C. More files are processed for backup

D. Increased memory swapping

Correct Answer: C

**QUESTION 2**

Which EMC Avamar Management Console navigation screen can be used to check when the last checkpoint and checkpoint validation occurred?

A. Server

B. Activity

C. Administration

D. Policy

Correct Answer: A

**QUESTION 3**

An EMC Avamar server is integrated with an EMC Data Domain system. A backup has expired on the Avamar server and garbage collection runs.

What is the impact to the backup stored on the Data Domain system?

A. The backup is deleted based on Data Domain retention policies

B. The backup is deleted from the Data Domain system

C. HFS check is run on the backup on the Data Domain

D. The backup is immediately replicated to another Data Domain

Correct Answer: B

Server maintenance activity monitoring Avamar performs the system maintenance operations for backup data on the Data Domain system, including HFS checks, checkpoints, rollbacks, garbage collection, and secure backup deletion. The ddmaint utility implements all required operations on the Data Domain system for the Avamar server. The ddmaint utility is installed on the utility node of a multi-node server, or the single node of a single-node server, during Avamar server installation. The ddmaint utility is not installed on the data nodes of the Avamar server. The ddrmaint utility logs

all maintenance activities on the Avamar server in the ddrmaint.log file. The following directory on either the utility node of a multi-node server or the single node of a single-node server contains the log file: /usr/local/avamar/var/ddrmaintlogs/ddrmaint.log The ddrmaint.log file is rotated when it reaches 25 MB in size.

**QUESTION 4**

For an Avamar Gen4 single node, how many Ethernet ports are provided?

A. 2

B. 4

C. 6

D. 8

Correct Answer: B

**QUESTION 5**

Which factor(s) affect the capacity utilization in an EMC Avamar environment?

A. Total amount of primary data being backed up

B. How often the backups are scheduled to run

C. Size of the grid and license amount

D. Whether HFS check succeeds every day

Correct Answer: A
