#### QUESTION 1

Which condition indicates an SP is in degraded mode?

- A. The SP Fault LED is solid blue.
- B. Unisphere shows SP unmanaged.
- C. The SP Fault LED is solid amber.
- D. The SP Fault LED is solid green.

Correct Answer: A

---

#### QUESTION 2

What event types can be viewed in Storage System Notifications?

- A. Storage projections; Data Mover load
- B. Storage usage; Disk shutdown
- C. Hard errors; Fan shutdown
- D. System startups

Correct Answer: A

---

#### QUESTION 3

You are working on a VNX Unified system that has a hardware fault on a storage processor and you need to determine which components of the SP are FRUs. What action would you take to get the needed information?

- A. Use the VNX Procedure Generator to view the specific VNX model's illustrated parts guide.
- B. Access the Alerts section of Unisphere and review the details of the specific hardware fault alert.
- C. View the appropriate VNX installation guide VNX on Powerlink.
- D. Use the VNX Procedure Generator to generate an SP replacement procedure.

Correct Answer: A

---

#### QUESTION 4

Which kind of back-end bus connectivity is supported on a VNX storage system?

- A. 4 lane 6 Gb/s SAS

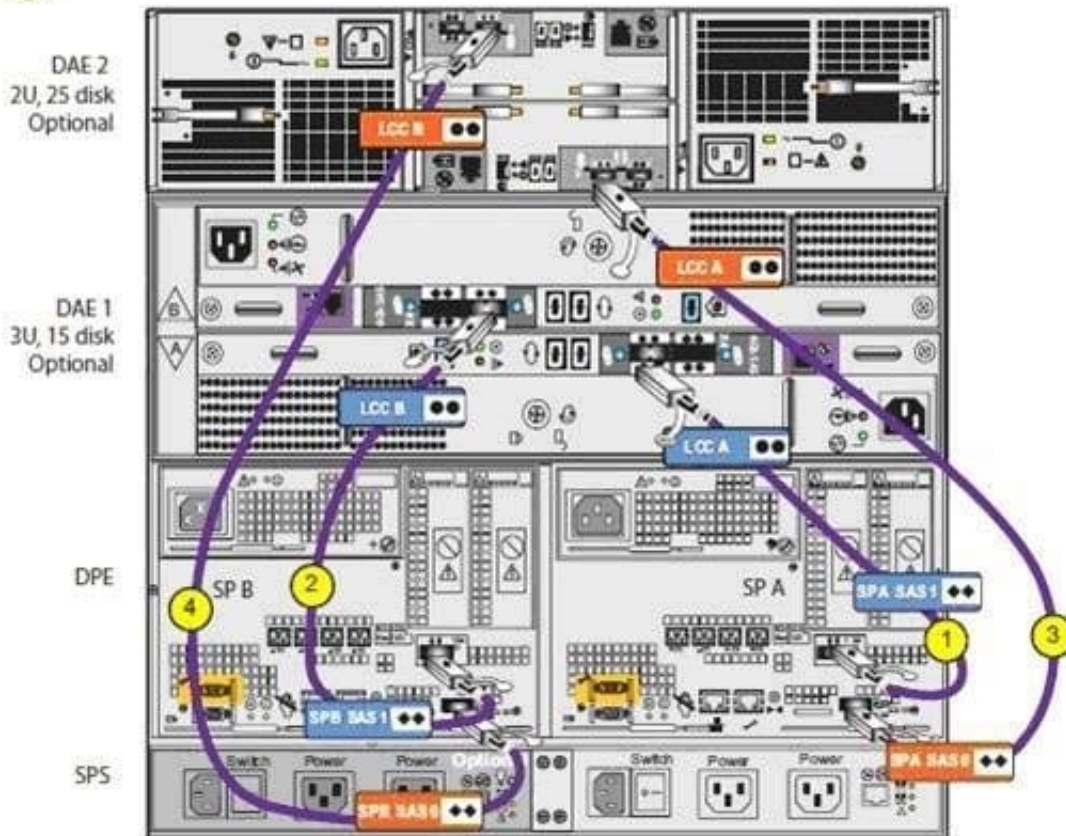

- B. 4 lane 6 Gb/s FC
- C. 2 lane 6 Gb/s SAS
- D. 2 lane 6 Gb/s FC

Correct Answer: A

**QUESTION 5**

Refer to the exhibit.

- 1 From SP A SAS 1 to DAE 0 LCC A
- 2 From SP B SAS 1 to DAE 0 LCC B
- 3 From SP A SAS 0 to DAE 1 LCC A
- 4 From SP B SAS 0 to DAE 1 LCC B

In this diagram both SAS 0 and SAS 1 buses are used to connect two optional DAEs. What are the advantages of this cabling configuration?

- A. DAE 1 and 2 are load-balanced across the SAS 0 and SAS 1 ports on each SP for improved performance.
- B. There are no specific advantages since both SAS 0 and SAS 1 ports are connected to the same internal SP bus.

- C. 15- and 25-drive DAEs must reside on different SAS buses to preserve future expansion options.
- D. The 25-drive DAE2 should be connected to SAS 0 along with the DPE drives to support EFD options.

Correct Answer: A
