### QUESTION 1

An EMC customer is using the Avamar Exchange 2007 plug-in for message level backups on two Microsoft Windows Exchange 2007 environments in an Active Directory Forest. They are deployed in a high availability configuration. The customer wants the ability to successfully backup after a cluster failover. What must be done to achieve a successful backup?

- A. Avamar backup service must be configured and started on the active node in the cluster
- B. Avamar backup service must be configured and started on all nodes in the cluster
- C. Download the MAPI Client Libraries from the Avamar software library
- D. Configure the AvamarBackupUser account on each node in the cluster to backup both Exchange environments

Correct Answer: A

---

### QUESTION 2

You are asked to implement a Dell EMC Avamar solution for a Microsoft Exchange 2010 environment. The Exchange 2010 server has three mailbox databases running circular logging mode. What is a consideration for this implementation?

- A. Incremental backup is not supported for this implementation
- B. Full, Incremental, and Differential backups are supported
- C. Old transaction logs are truncated after Incremental backup
- D. There is no limit on the maximum number of transaction log files

Correct Answer: A

---

### QUESTION 3

A Dell EMC Avamar 7.4.1 administrator is testing the file level restore feature from VMware image backups. They restore a large number of files to VM1, then restore the same files to VM2. Both restores succeed, but the restore for VM2 is much slower.

What is a possible reason for the slower restore performance?

- A. Avamar client software is not installed on VM2.
- B. The restore to VM2 was a redirected restore.
- C. HotAdd transport is not available for VM2.
- D. VM2 does not have a network connection.

Correct Answer: B

---

#### QUESTION 4

An EMC customer has NetWorker integrated with an Avamar deduplication node, which is also replicating to the Avamar disaster recovery node. The auto recovery operation failed from the replica during the recovery of a Windows 2008 client. EMC support suggested to use the "RECOVER\_FROM\_REP\_HOST=Yes" environment variable. The customer recovers the data successfully.

Where will this environment variable be set?

- A. Windows 2008 client
- B. Avamar deduplication node
- C. Avamar replication node
- D. NetWorker server

Correct Answer: A

---

#### QUESTION 5

Click on the calculator icon in the upper left corner.

A current EMC Avamar customer is having trouble completing replication on a nightly basis. The customer's networking team sees that Avamar is only utilizing about 40% of the available bandwidth on their 45 Mb WAN link. The latency or round trip time on the WAN link is 78 ms. The customer would like to tune Avamar replication to use more of the available bandwidth. What is the Bandwidth Delay Product for this link?

- A. 428 KB
- B. 489 KB
- C. 512 KB
- D. 604 KB

Correct Answer: A
