QUESTION 1

An EMC customer is looking for options to back up their smaller remote sites with easy remote management, so they want to use Avamar Virtual Edition (AVE).

Before installing ESX hardware at the remote sites they want to do a proof of concept using the existing ESX 4.1 server that they have at the data center. They have provisioned 2 TB of virtual disks using VMAX thin provisioning with RAID 1

data devices. They have tested the backup of three servers and do not see an improvement.

According to best practices, what should the customer have done to avoid performance issues?

A. Use thick devices for the virtual devices.

B. Use ESX 5.0i to host the AVE server.

C. Use RAID 10 for the virtual devices.

D. Use lazy zeroing to zero out all blocks.

Correct Answer: A

QUESTION 2

A customer is performing a restore of a Microsoft SQL database with the tail-log backup option. However, the restore process is failing.

What is a possible cause of this behavior?

A. Transaction log has been corrupted.

B. Database is set to use the full recovery model.

C. Database is online.

D. Point-in-time specified is after the last full backup.

Correct Answer: A

QUESTION 3

A customer has a 1 TB Oracle 10g database on a HP-UX 11.31 client. They have created two groups that run once every 24 hours. One group is for backing up the database; the other group is for backing up the file system. During the course of a week, the customer notices that the client is taking up twice the space as expected. What is a probable cause?

A. Client is being backed up twice

B. DBF files are not excluded in the file system dataset

C. Group that backs up the database is being run twice a day

D. Block Change Tracking is not being used

Correct Answer: B

QUESTION 4

Click on the calculator icon in the upper left corner.

A current EMC Avamar customer is having trouble completing replication on a nightly basis. The customer\'s networking team sees that Avamar is only using about 20% of the available bandwidth on their 100 Mb/s WAN link. The latency or round trip time on the WAN link is 94 ms. The customer would like to tune replication to use more of the available bandwidth

What is the Bandwidth Delay Product for this link?

A. 1335 KB

B. 1147 KB

C. 1534 KB

D. 1748 KB

Correct Answer: B

QUESTION 5

An EMC employee has been assigned to run securedelete against two clients for a total of 20 GBs on an Avamar server. During a planning discussion with the customer, they want to know what the impact on their Avamar server would be while securedelete is running.

What is the correct response to the customer?

A. GSAN will be in admin mode and no backups can be run.

B. Avamar will continue to function with a limited amount of available threads.

C. All storage nodes will operate in data=journal mode.

D. Backups and restores in progress may continue to run.

Correct Answer: A
