Correct Answer: ADEG

QUESTION 5

You have targeted a subnet of lab computers that all need to be reimaged. You create a Migration task that will reimage the machines using Targeted Multicast™ and start the task. The job fails, stating that a Multicast Domain Representative could not be found.

What is the most likely cause of the error?

- A. There is not a PXE Proxy on the targeted subnet.
- B. A preferred Multicast Domain Representative has not been selected for the targeted subnet.
- C. There is not a managed node with the Targeted Multicast client that will persist on the subnet.
- D. The routers between the Core Server and the targeted subnet have not been configured to pass multicast packets.

Correct Answer: C
