### QUESTION 1

An administrator has setup a new RES Workspace Manager environment that uses a database hosted on a Microsoft SQL Server to store its configuration. Company policy dictates that only Windows Authentication can be used to connect to the database. During the creation of the database the name of a security group was provided that holds all the user accounts that need to be able to use an RES Workspace Manager Console or access the database.

Which Windows service must be reconfigured to ensure that RES Workspace Manager works properly in this environment?

- A. The SQL Server Agent Service on the database server.
- B. The RES Workspace Manager Agent Service all Agent computers.
- C. The RES Workspace Manager Agent Service on each Relay Server.
- D. The RES Workspace Manager Console Service on the management server.

Correct Answer: B

---
