### QUESTION 1

See the specification below in which a decision point is described:

$$R = (D \text{ OR } E) \text{ AND } F$$

Use of the coverage type decision points modified condition/decision coverage produces the following table with test situations:

R = (D OR E) AND F	1	0
D	<del>101</del>	<del>001</del>
E	.	001
F	101	100

Which values are missing where the dots are stated (? to make the table complete?

- A. 010
- B. 011
- C. 110
- D. 111

Correct Answer: B

### QUESTION 2

See the specification below:

A specification includes the parameters A, B and C.

A and B each have 3 equivalence classes and C has 2.

What is the minimum number of test situations that will be generated by applying the coverage type pairwise testing?

- A. 3
- B. 6
- C. 9
- D. 18

Correct Answer: C

### QUESTION 3

What is a major reason for evaluating the test basis during the preparation phase?

- A. Avoiding costly corrective work at a later stage of the project.
- B. Being able to design the test infrastructure at an earlier stage.
- C. Being able to build test data quickly.

Correct Answer: A

---

#### QUESTION 4

See the definition below: The ease with which the information system can be adapted to new requirements of the user and the changing external environment, or to correct errors. Of which quality characteristic is this the definition?

- A. manageability
- B. flexibility
- C. maintainability

Correct Answer: C

---

#### QUESTION 5

A test design often consists of a logical and a physical test design. What does a physical test design add?

- A. It specifies all of the test situations
- B. It shows that the required level of coverage has been achieved
- C. It serves as thorough preparation for the execution phase
- D. A single logical test case is elaborated into a number of physical test cases

Correct Answer: C
