---

#### QUESTION 4

Which three methods can be used to access an ODBC data source from within FileMaker Pro 11? (Choose three.)

- A. Execute SQL script step
- B. Import Records script step
- C. File > Sharing > ODBC/JDBC menu item
- D. File > Import Records > Folder... menu item
- E. File > Manage > External Data Sources... menu item

Correct Answer: ABE

---

#### QUESTION 5

A database has an Order table and a Customer table. There is a relationship between Customer and Order. On a layout based on the Customer table there is a portal showing all of that customer's orders for the current calendar year. The portal has no filter criteria applied. There is a calculation field in the Customer table, zSumOrders, that adds up the total amount of all the customer's orders for the year. This field is displayed below the portal. Which one may cause the displayed value of zSumOrders on a customer record to change?

- A. adding one or more sort criteria to the Orders portal
- B. adding one or more sort criteria to the relationship on which the Orders portal is based
- C. using Filter Portal Records to further limit the set of records displayed in the Orders portal
- D. changing the criteria of the portal's relationship to further limit the set of records displayed in the Orders portal
- E. selecting the Save record changes automatically setting in the Layout Setup dialog for the layout in question

Correct Answer: D
