D. Network

Correct Answer: D

QUESTION 5

Andrew works as an Administrator for a Windows 2000 based network. The network has a primary external DNS server, and a secondary DNS server located on the ISP's UNIX server, in order to provide fault tolerance. Users complain that they are unable to connect to the URL when using the secondary server. What should Andrew do to resolve the problem?

A. He should disable the fast zone transfer in the Advanced tab of the Properties window on the secondary server.

B. He should select the BIND secondaries check box in the Zone Transfer tab of the Properties window on the primary server.

C. He should select the BIND secondaries check box in the Advanced tab of the Properties window on the primary server.

D. He should enable the fast zone transfer in the Advanced tab of the Properties window on the primary server.

Correct Answer: C
