QUESTION 1

Ryan works as a Software Developer for Mansoft Inc. He creates an ASP.NET Web application named MyWebApplication using Visual Studio .NET 2005. MyWebApplication performs validation on XML files in a directory. Whenever a new XML file appears in the directory, MyWebApplication opens the file, checks it for validation, and updates it accordingly. Ryan wants to ensure that each update performed on XML files is logged in the Web application log. He creates a String object named Var1, to store the message to be logged. Which of the following will he use to accomplish the task?

Each correct answer represents a part of the solution. Choose two.

- A. The Trace.WriteLine method
- B. The EventLog.WriteEntry method
- C. The EventLog.EventLogSource property
- D. The EventLog.Source property

Correct Answer: BD

QUESTION 2

You work as a Software Developer for Mansoft Inc. You create an application using Visual Studio .NET 2005. You write code in the application and execute it, but it caused an error. Now, you want to find out the reason that has thrown the exception. Which of the following properties will you use to accomplish this task?

- A. Source
- B. StackTrace
- C. Message
- D. Data
- E. TraceSwitch

Correct Answer: B

QUESTION 3

Sam works as a Software Developer for SamTech Inc. He develops a Windows-based application, named App1, using Visual Studio .NET. He wants to set a security policy for the application. To accomplish the task he uses the PolicyLevel class. He wants to set the current policy level to the default state. Which of the following methods will he use to accomplish the task?

- A. Resolve
- B. ChangedNamePermissionSet
- C. Reset

D. Recover

Correct Answer: C

QUESTION 4

You work as a Software Developer for ABC Inc. You create a Web service application named MyWebService using Visual Studio .NET 2005. You use the MyWebService to create a SOAP message. You are not sure whether or not the SOAP message format is correct. Therefore, you decide to use the AsynchronousOperationException class. This class is used to throw an exception when the format of a SOAP message is invalid. Which of the following code segments will you use to accomplish the task?

Each correct answer represents a part of the solution. Choose all that apply.

- A. `public class MyException : AsynchronousOperationException { //Code here }`
- B. `public class AsynchronousOperationException : AsynchronousOperationException { //Code here }`
- C. `public class AsynchronousOperationException : Exception { //Code here }`
- D. `public class MyException : Exception { //Code here }`

Correct Answer: CD

QUESTION 5

John works as a Software Developer for DawnStar Inc. He creates a class, named MyClass1. He wants to generate a key pair that he will use to give the compiled assembly a strong name. Which of the following tools will he use to accomplish the task?

- A. Gacutil.exe
- B. Sn.exe
- C. Installutil.exe
- D. Al.exe

Correct Answer: B
