QUESTION 1

You work as a Software Developer for ManSoft Inc. You use C# .NET to create an assembly named TestAssembly that will be used by other applications, including a standard COM client application. You must deploy the assembly on the COM application to a client computer. You must ensure that the COM applications can instantiate components within the assembly as COM components. Which of the following options will you use to accomplish this task?

A. Generate a registry file for the assembly by using the Assembly Registration Tool (Regasm.exe) and register the file on the client computer.

B. Deploy the assembly to the global assembly cache on the client computer. Add a reference to the assembly in the COM client application.

C. Create a strong name of the assembly by using the Strong Name tool(Sn.exe).

D. Generate a type library for the assembly by using the Type Library Importer (Tlbimp.exe) and register the file on the client computer.

Correct Answer: A

QUESTION 2

You work as a Software Developer for ABC Inc. You are defining a component for an application. In some deployments, the component will be deployed on the same computer as the application. In other deployments the component will be deployed on a separate computer. The component has implicit dependencies and needs to access and use server-side resources that cannot cross system boundaries.

You must ensure that your component design supports both deployment scenarios. What will you do to accomplish the task?

A. Create a SingleCall object.

B. Create a marshal-by-value object.

C. Create a marshal-by-reference object.

D. Create a Singleton object.

Correct Answer: C

QUESTION 3

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2008 as its application development platform. You are creating a custom control library using .NET Framework 3.5. Developers will use this custom control on Web pages in multiple applications. Each and every ASP.NET application will be configured by using different state management approaches. You have to ensure consistent state management for all instances of the custom control. Which of the following states will you use to accomplish this task?

A. Session state

B. Application state

C. Control state

D. View state

Correct Answer: C

QUESTION 4

Which of the following APIs is used to collect information about any running state and any errors that occur within an ASP.NET application?

A. Profile API

B. Health Monitoring API

C. Error Handling API

D. Personalization API

Correct Answer: B

QUESTION 5

You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET as its application development platform. You are creating an assembly named Assem1 using .NET Framework. Assem1 contains a public method. The global cache contains a second assembly named Assem2. You need to ensure that the public method is only called from Assem2. Which of the following permission classes will you use to accomplish the task?

A. PublisherIdentityPermission

B. DataProtectionPermission

C. StrongNameIdentityPermission

D. GacIdentityPermission

Correct Answer: C
