QUESTION 1

A customer is running Web messaging related applications using a Hitachi NAS Platform 3080. They are worried about data inconsistencies and would like to know how a WFS-2 file system can benefit their current environment. Which two functions will provide an additional layer of data protection? (Choose two.)

- A. multiple Checkpoints
- B. quick rollback to a previous successful snapshot
- C. data recovery from the deleted file system
- D. the "consistency-check" command

Correct Answer: AB

QUESTION 2

A customer has two independent Hitachi NAS Platform 3080 nodes. They want to implement a Hitachi NAS Platform 2-node cluster. Which two are required for implementing this solution? (Choose two.)

- A. Use an external SMU.
- B. Ensure that all system drives are accessible by both nodes.
- C. Connect a 10 GbE network switch for Cluster interconnect.
- D. Assign dedicated storage system for each node.

Correct Answer: AB

QUESTION 3

A customer wants to discuss manual site failover design. The solution design must guarantee the replication of file system snapshots. What should the customer use?

- A. TrueCopy
- B. Intelligent Data Replication
- C. Incremental Data Replication
- D. Transfer Primary Access

Correct Answer: A

QUESTION 4

You are discussing with your customer how their Hitachi NAS solution is used in conjunction with Hitachi Universal

Replicator in a disaster recovery scenario. You explain that the logical state of an S-Vol can be rapidly changed to allow write access using a single CLI command. What is the CLI command?

- A. sd-peg
- B. sd-recovery
- C. span-assign
- D. span-rewrite-cod

Correct Answer: A

QUESTION 5

An enterprise customer has a diverse Active Directory environment consisting of multiple untrusted departmental Windows domains. The customer wants to delegate administration to departmental administrators using the highest level of security. Which EVS security configuration will achieve this business requirement?

- A. Use the global EVS security context for all EVSs.
- B. Use an independent EVS security context for each EVSs.
- C. Use IPSEC for all EVSs to create secure client connections.
- D. Use SSL certificates to encrypt client communications.

Correct Answer: B
