-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

A customer has recently upgraded their backup environment to HP Data Protector 7.0. They have several hosts with very large filesystems and are experiencing poor network performance during backup of these hosts. What should the company implement to help improve their backup performance?

- A. server-side deduplication
- B. inline network deduplication
- C. post-backup deduplication
- D. target-side deduplication

Correct Answer: A

Server-side deduplication is performed on a separate media agent client (a gateway) by the media agent. This reduces the load on the backed up system and on the target device, but does not reduce the amount of network traffic between the disk agent and media agent Book: Designing HP Enterprise Storage Solutions (Page M6-32)

QUESTION 2

Which benefits would the customer realize after implementing the new solution, compared to the existing solution? (Select two.)

- A. reliable backups
- B. reduced cooling costs
- C. scheduled archives
- D. reduced maintenance
- E. reduced power costs

Correct Answer: AC

QUESTION 3

To accurately propose an HP StoreOnce B6200 implementation, which free HP tool is required to analyze the existing SAN topology?

- A. SAN Designer
- B. HP Intelligent Infrastructure Analyzer
- C. HP Configuration Utility
- D. SAN Visibility

Correct Answer: D

SAN Visibility - SAN Analysis and Diagnostics - Hewlett Packard

<http://h18006.www1.hp.com/storage/networking/sansolutions.html> Free SAN utility to view your SAN Configuration including firmware revisions and ... Helps with SAN Diagnostics and with analysis and optimization of your SAN. ... activities and providing a quick and accurate view of your SAN topology.

QUESTION 4

A customer needs an enterprise backup system that will provide both VTL and NAS emulation with both scale-out and scale-up performance. The solution must offer a high level of redundancy and automated backup restart after failover. Which storage solution should the customer deploy?

- A. HP StoreEver VLS9200 Virtual Library
- B. HP StoreOnce D2D2502 Backup System
- C. HP StoreEver RDX Removable Disk Backup
- D. HP StoreOnce B6200 Backup System

Correct Answer: D

QUESTION 5

Match the HP Data Protector (DP) term with the appropriate description.

Cell Manager

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Media Agent

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Installation Server

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Disk Agent

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Hot Area:

Cell Manager

<input type="checkbox"/>	<input type="checkbox"/>
runs the core DP software and contains the internal database	
sends data the device for writing to the medium	
holds a repository of DP installation packages for a specific architecture	
reads or writes data on the client	

Media Agent

<input type="checkbox"/>	<input type="checkbox"/>
runs the core DP software and contains the internal database	
sends data the device for writing to the medium	
holds a repository of DP installation packages for a specific architecture	
reads or writes data on the client	

Installation Server

<input type="checkbox"/>	<input type="checkbox"/>
runs the core DP software and contains the internal database	
sends data the device for writing to the medium	
holds a repository of DP installation packages for a specific architecture	
reads or writes data on the client	

Disk Agent

<input type="checkbox"/>	<input type="checkbox"/>
runs the core DP software and contains the internal database	
sends data the device for writing to the medium	
holds a repository of DP installation packages for a specific architecture	
reads or writes data on the client	

Correct Answer:

Cell Manager

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Media Agent

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Installation Server

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client

Disk Agent

runs the core DP software and contains the internal database
sends data the device for writing to the medium
holds a repository of DP installation packages for a specific architecture
reads or writes data on the client
