100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by HP Official Exam Center

- ⚙️ **Instant Download** After Purchase
- ⚙️ **100% Money Back** Guarantee
- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

You are designing an HP SPAR StoreServ solution to host a customer Microsoft Hyper-V 2012 environment load on the transport network?

- A. T10 Unmap (T10U)
- B. Offload Data Transfer (ODX)
- C. vStorage APIs for Array Integration (VAAI)
- D. T10 Data Integrity Field (DIF)

Correct Answer: B

QUESTION 2

A leading automotive technology company wants to increase the performance and capacity of the storage infrastructure that supports the design and manufacture of its line of Formula 1 racing cars. The company is also interested in safeguarding its mission-critical data and eliminating the threat of business disruption.

Due to the massive engineering and technical effort required to create a new race car design and to enable regular delivery of upgraded parts to the race track while maintaining a competitive edge, it is necessary to have advanced applications running on a high-performance IT infrastructure. The company operates out of two data centers. The centers support a Plant Lifecycle Management database, an Enterprise Resource Planning (ERP) system, and various trackside systems to set up the race car and aid race strategy. In addition, the centers run applications for Computer-Aided Design (CAD) Computer-Aided Manufacturing (CAM), and Computational Fluid Dynamics (CFD) packages. The company has deployed Oracle and SQL databases, VMware virtual machines, email, and all other applications on an HP 6400 Enterprise virtual Array (EVA). The EVAs automatically replicate between the two data centers to guard against failure. The EVAs are aging, applications are more sophisticated, data volumes have grown exponentially, and bottlenecks in the storage system are now having a significant effect on the performance of the simulation and analysis tools that are vital to the company's competitive position. The data storage problem has reached a point where the company is forced to store primary data at the secondary site causing the loss of their disaster recovery capability. The company's top five IT Improvement goals are:

- Reduce complaints about storage system availability.
- increase support for sophisticated design and manufacturing applications.
- Provide a robust replication capability between data centers.
- increase storage utilization while deploying additional capacity.
- Simplify operations during peak workloads.

Moreover, the company's top three business benefit goals are:

- Ensure rapid data retrieval to aid in quick decision making.
- Protect mission-critical data and ensure business continuity.
- Recover costs from existing infrastructure, thus providing increased IT funds for additional projects.

Which storage technologies should you present to help meet business benefit goals? (Select two)

- A. Storage tiring technology
- B. Storage federation technology
- C. Snapshot technology
- D. Thin technology
- E. Remote replication technology

Correct Answer: AB

B - seems to be more correct than E.

QUESTION 3

Refer to the scenario.

A large publicly-traded motion picture exhibitor that is a leader in digital and 3D cinema deployments operates 233 theaters and more than 2,200 screens in small to mid-sized communities in 35 states around the United States. They rely on

MS Exchange Server 2010 for email. MS SQL Server 2010 for analyzing data about movies and theater-goers, and MS Excel 2010 for crunching numbers.

The company runs nightly incremental backups and a full weekly backup that consists of close to 7 TB of data which takes up 72 hours to complete. The quarterly backups add an additional 7 TB of data. Tapes are inventoried and transported

from the main data center to the disaster recovery site 150 miles away. The process of transporting tape cartridges to and from the Disaster Recovery site requires hours of daily work.

The company currently relies on an aging robotic tape library and a process that takes the nightly backup tapes offsite every morning. Additionally, the company keeps an inventory, and if a restore is necessary they have to retrieve the tapes

from the DR site and transport them to the main data center site. They have a 7 year data retention plan, and the tapes are expensive and not always reliable. Given the company's current system, if a full weekly backup fails over a weekend,

the re-run could take up to 10 hours, even if just one job failed.

The company has deployed a virtualized server infrastructure which runs VMware vSphere 5 on HP BladeSystem c7000 enclosures and BL460c servers interconnected with HP Virtual Connect Flex-10 10Gb Ethernet Modules as well as

several HP ProLiant DL380 servers. The company's top four IT improvements goals are as follows:

- replacing the aging robotic tape library
- enabling replication of backed up data from the main data center to the disaster recovery site (150 miles)

-retaining more backup data in smaller disk space

- increasing efficiency reliability, and ease of system administration Moreover the company's top three business benefit goals are as follows:

-increased confidence in disaster recovery

-minimal disruption by backups during regular business hours

-improved management of external audits

The company has asked that you create multiple solution proposals and prioritize one when you return for a presentation.

How does an HP StoreOnce Backup solution meet the customer IT and business needs?

- A. Eliminates the need for tape backups for long-term archiving
- B. Multiplies the data, which is then replicated to a remote location
- C. Backs up the data via a WAN link
- D. Provides a bandwidth-effective replication to remote sites

Correct Answer: A

QUESTION 4

Which HP 3PAR StoreServ features improves storage array resiliency?

- A. Persistence Ports
- B. Virtual Copy
- C. Virtual Domains
- D. Virtual Lock

Correct Answer: A

QUESTION 5

A customer has an environment spanning two data centers in a campus environment The primary storage is an HP 3PAR StoreServ 10400 System. Data is replicated between existing sites with an RPO of zero. There has recently been a hurricane and extensive flooding. While the customer was not directly impacted they are now questioning whether they have adequate protection. You have been brought in to analyze the customer environment and make recommendations. You suggest creating a data center at a remote location and actively replicating the data to it.

Which HP 3PAR replication solution meets the customer requirements?

- A. Many-to-One
- B. Synchronous Long Distance

C. Bi-directional One-to-One

D. One-to-Two

Correct Answer: B
