QUESTION 1

What is the difference between the URL-based and the HTML-based recording modes?

- A. URL is more accurate, as it traces every resource request.
- B. HTML is more accurate, as it takes into account client-side logic.
- C. HTML replay is based on UI elements, while URL works at the protocol level.
- D. They differ in the way HTTP requests to the server are built during replay.

Correct Answer: D

QUESTION 2

What do transaction times measure?

- A. transmission and response time between client and server
- B. time spent only on client
- C. network time only
- D. database time only

Correct Answer: A

QUESTION 3

You are asked to generate a string value that will be unique for every user for a given scenario execution. You are running the test in HP LoadRunner Controller. Which minimum set of values provided by lr_whoami provides a unique string value for every user, even if you have multiple groups?

- A. int *vuser_id, int *scid //userid and scenario id
- B. int *user_id, char **sgroup, int *scid //user id and group name and scenario id
- C. int *vuser_id, char **sgroup //user id and group name
- D. int *user_id, char **sgroup //user id and group name
- E. int *vuser_id // user id

Correct Answer: C

QUESTION 4

What is the best way to compare two versions of a script?

- A. You open a second instance of VuGen and do a line-by-line comparison.
- B. You click on Tools > Compare with Script ...
- C. You use the test result to compare the scripts.
- D. You verify the output.txt of both scripts.

Correct Answer: B

QUESTION 5

What is the purpose of capturing think times?

- A. It simulates the keyboard entry time of an end user on a system.
- B. It is necessary to make VuGen pause long enough to capture the server responses.
- C. It prevents excessive CPU consumption for virtual users on the load generators.
- D. It is necessary to make VuGen pause to reduce the amount of data required during testing.

Correct Answer: A
