QUESTION 1

Your business process is composed of five sequential, logical steps:

1. Login
2. customer search
3. customer selection
4. customer update
5. logoff

You want to be able to measure end-to-end response times for each logical step. To accomplish this, what will you set them as?

- A. distinct functions
- B. distinct transactions
- C. separate actions
- D. distinct Vuser scripts

Correct Answer: B

QUESTION 2

Which formats contain valid VuGen built-in DFEs?

- A. Base64, Base 32, XML
- B. JSON, XML, Base64
- C. URI, XML, VDI
- D. SOAP, URL, JSON

Correct Answer: B

QUESTION 3

You have just completed an advanced script that must get a real-time security encryption key for a login function. The security encryption key is obtained by loading a custom DLL using `rc=lr_load_dll("SecureAcces.dll")` and then calling a custom function. The login logic works on the Controller where you are developing the VuGen script, but when replaying on remote Load Generators, the script fails with error code `rc=11`.

How can you fix this error 11? (Select two.)

- A. The full path should have been specified. You change the command to `lr_load_dll("c:\temp\SecureAcces.dll");`

B. In the Controller, you select the script on the Design tab, then click the buttons Details, More, Files, Add and add the DLL

C. \temp\SecureAcces.dll.

D. In the VuGen Run-time Settings, you select Additional attributes and click Add, then you select the DLL c:\temp\SecureAcces.dll so it can be found by all machines.

E. The DLL name was misspelled. You correct the error and rerun the scenario.

F. You add the DLL c:\temp\SecureAcces.dll using VuGen menu File > Add Files to Script.

Correct Answer: BE

QUESTION 4

After finishing editing a previously recorded script, you push the Play button. Which log contains the actions and errors of the Vuser as it runs?

A. Recording Log

B. Generation Log

C. Replay Log

D. current log that is playing

Correct Answer: C

QUESTION 5

You encounter a situation where the applications communicate via Web Services server-to-server. Both servers are running on Linux. What is the best way to simulate the load on the second server?

A. Launch VuGen on the first server and record the process using SOA Protocol.

B. Get the code of the application and create a Java web service call to the second server.

C. Record two scripts and merge them.

D. Use tcpdump and capture the communication, and import using Analyze Traffic.

Correct Answer: D
