**QUESTION 1**

A network administrator is implementing a network with HP Comware and HP Provision switches. When the network administrator boots the switches for the first time, what are the factory default settings of all of the switches in the network? (Select two.)

- A. All interfaces are enabled.
- B. Routing is enabled.
- C. SSH is enabled.
- D. DHCP client is defined for all VLANs.
- E. No passwords are defined.

Correct Answer: BE

**QUESTION 2**

Refer to the network and ARP table exhibit.

ARP Table

Device	IP Address	MAC Address
User	10.1.12.12	0001.0012.0012
SwitchA	10.1.12.2	0001.0012.0002
SwitchB	10.1.12.1	0001.0012.0001
SwitchB	10.1.11.1	0001.0011.0002
Server	10.1.11.11	0001.0011.0011

The user on the left side of the exhibit wants to build a connection to the server on the right. Assume that SwitchA and SwitchB are HP Comware switches. For which IP address does the user generate an ARP?

- A. The user generates an ARP for the MAC address that corresponds to 10.1.11.1.
- B. The user generates an ARP for the MAC address that corresponds to 10.1.12.1.
- C. The user generates an ARP for the MAC address that corresponds to 10.1.12.2.

D. The user generates an ARP for the MAC address that corresponds to 10.1.1111.

Correct Answer: D

### QUESTION 3

Based on the default precedence used to rank routing protocols in HP Comware switches, if a default route (0.0.0.0/0) is learned from multiple routing protocols, which source would the Comware operating system prefer?

- A. Static
- B. RIP
- C. External BGP
- D. Internal OSPF

Correct Answer: D

### QUESTION 4

Refer to the network exhibit.

Assume the network shown in the exhibit has implemented RSTP Based on the topology, which ports are root ports?

(Select two)

- A. SwitchA port 2
- B. SwitchB port 2
- C. SwitchB port 1
- D. SwitchD port 2
- E. SwitchC port 2

Correct Answer: AC

---

### QUESTION 5

A network administrator has an HP Comware switch that is configured with OSPF. The network administrator views the routing table and sees that a default route was learned from an OSPF neighbor (10.1.1.1). However, the network administrator wants to override this action and use a different neighbor (10.1.1.2) for the default route.

The network administrator configures this command:

```
[Comware] ip route-static 0.0.0.0 0 10.1.1.2
```

After configuring the command, the network administrator examines the routing table and notices that the original neighbor's default route is still in the routing table, but the static route is missing.

What is the cause of this problem?

- A. OSPF routes have a lower precedence value
- B. The ip default-gateway command must be used when creating a default route
- C. Only one routing protocol can be operational on a Comware device
- D. The static route has a syntax mistake

Correct Answer: A
