100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by HP Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

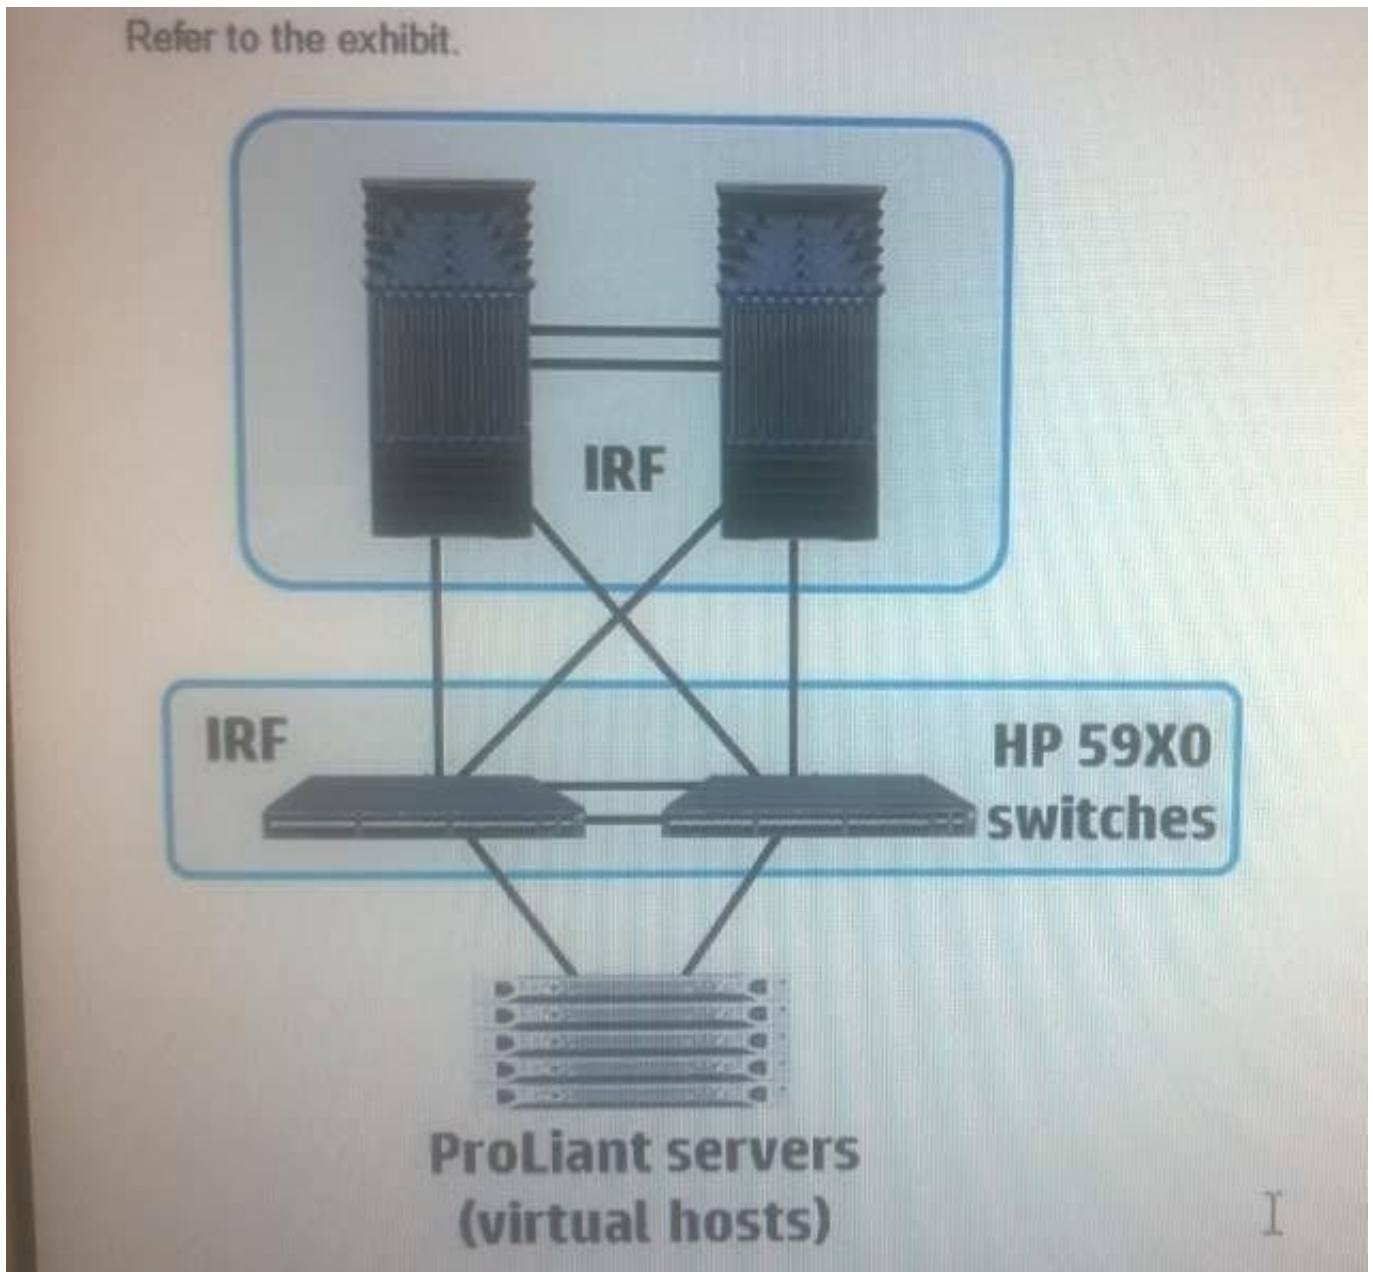

QUESTION 1

A customer wants a simple solution for deploying virtual services at a branch. Which devices support modules running a VMware ESXi hypervisor? (Select two)

- A. HP 2920 Switch Series
- B. HP MSR30 Router Series
- C. HP 5400 zl Switch Series
- D. HP 7500 Switch Series
- E. HP VSR1000 Virtual Services Routers

Correct Answer: BE

QUESTION 2

When does this design benefit a virtualized data center?

- A. The access layer and core switches use several layers of redundancy protocols, including Multiple Spanning Tree Protocol (MSTP) at Layer 2, Virtual Router Redundancy Protocol (VRRP) at Layer 3, and Intelligent Resilient Framework (IRF) at Layer 4.
- B. The access layer and core switches can connect on link aggregation groups. VLANs can extend across these aggregations, but they are more stable and highly-available than redundant Layer 2 links that use spanning tree.
- C. The access layer switches can integrate their Intelligent Resilient Framework (IRF) capabilities with those on the core switches to create a single CLOS fabric.
- D. The core switches can implement Virtual Ethernet Port Aggregator (VEPA) to extend tunnels for virtualized traffic across the data center backbone.

Correct Answer: B

QUESTION 3

Data center includes services within the same VLAN and subnet that communicate with each other multicast application. Variable Internet Group Management Protocol (IGMP) on this VLAN on data center switches?

- A. To enforce security boundaries between servers assigned to different multicast groups
- B. To eliminate multicast traffic on server ports that have not requested the multicasts
- C. To ensure that different applications do not use overlapping multicasts addresses
- D. To enable the servers to hear each other's multicast transmission

Correct Answer: B

QUESTION 4

An architect is planning an HP Wired-WLAN solution for an office with approximately 4000 users. The solution will have 256 MSM460 APs WLAN controllers. Users must be able to roam seamlessly around the site.

Which strategy meets these needs?

- A. Assign users to different VLANs based on the APs to which they connect, and distribute traffic centrally at the controller.
- B. Assign users to different VLANs based on the APs to which they connect, and distribute traffic locally at the AP.
- C. Assign all users to the same VLAN, and distribute traffic locally at the AP.
- D. Assign all users to the same VLAN and distribute traffic centrally at the controller.

Correct Answer: D

QUESTION 5

A company experienced a denial of service attack when an infected employee device connected to the network. Which secret devices and prevents them from accessing the network?

- A. Authentication solution
- B. Data security solution
- C. Network Based Anomaly Detection (NBAD)
- D. Endpoint integrity solution

Correct Answer: D
