QUESTION 1

Which IT/business challenges are relevant to development management? (Select three.)

A. Different development methodologies are needed.

B. A variety of development tools are needed.

C. Heterogeneous environments are extremely difficult to manage.

D. Application teams are distributed.

E. Mobile computing is rapidly growing and must be managed effectively.

F. Ongoing business events, such as MandA and creation of new lines of business, highlight the inadequacy of a one-time portfolio assessment or limited project management processes.

Correct Answer: ABC

QUESTION 2

Which statement is most accurate with respect to Application Security validation AND is most likely a concern of the VP of Applications?

A. ALM security reduces cost to the business by detecting security threats and blocking unauthorized access to application assets.

B. A leading cause of IT waste (cost) is poor defect management and rework. The HP approach to ALM security improves this by accurately identifying security defects earlier in the application lifecycle where risk can be more efficiently mitigated.

C. A leading cause of IT waste (cost) is poor defect management and rework. The HP approach to ALM security improves this by accurately identifying security defects after an application is in production and by providing actionable information to developers for future updates.

D. The goal of ALM security is to reduce service outages and reduce overall operational costs to the business. ALM security improves the stability and performance of the applications by providing real- time metrics for better business decision making.

Correct Answer: D

QUESTION 3

What are the key terms associated with composite applications? (Select two.)

A. Automatic maintenance

B. Shared services

C. Application sensitive storage management

D. Virtualization

E. Provider-consumer

Correct Answer: BC

QUESTION 4

Which statement best describes the capabilities of HP Software Security Center as they relate to the HP ALM Solution?

A. Secure ALM increases development productivity by automatically identifying and resolving security defects in production environments using Static Application Security Testing technology to reduce the total cost of security in production.

B. HP\\'s Software Security Center solutions are integrated into BSM to promote a customer centric business focused approach to security management.

C. HP\\'s approach to ALM security automates and correlates dynamic, static, and runtime test results into discrete defect tracking information with actionable results.

D. HP\\'s approach to ALM security provides a high-level view of risk management metrics for improved business decision making.

Correct Answer: B

QUESTION 5

Which phrase describes the value proposition for HP Software\\'s approach to quality management?

A. rapid provisioning of infrastructure, services, and deployment of applications

B. faster delivery of quality with connected management and execution on a comprehensive, flexible platform

C. real-time topology linking business services with the underlying physical, virtual, and cloud infrastructure

D. real-time, event-based synchronization

Correct Answer: B
