QUESTION 1

Which command can be used to verify whether a BGP prefix is being advertised to a specific neighbor?

- A. show route protocol bgp
- B. show bgp summary
- C. show bgp neighbor
- D. show route advertising-protocol bgp

Correct Answer: D

QUESTION 2

Which two statements describe benefits of the Virtual Chassis? (Choose two.)

- A. Virtual Chassis offers control plane redundancy, which allows the use of NSR.
- B. Virtual Chassis is an open standard to allow cross-vendor compatibility.
- C. Virtual Chassis can be implemented on all Junos-based devices.
- D. Virtual Chassis allows you to manage multiple switches as a single entity and potentially eliminate using STP.

Correct Answer: AD

QUESTION 3

You want to share routes between your Junos device's master routing instance and another routing instance. Which feature would be used to accomplish this task?

- A. a static route
- B. filter-based forwarding
- C. a RIB group
- D. an aggregate route

Correct Answer: C

QUESTION 4

Which configuration summarizes external routes in the 172.16.0.0/22 range into a single prefix on an ABR for Area 1?

- A. `protocols { ospf { area 0.0.0.1 { nssa { default-lsa { default-metric 1; metric-type 1; } } area-range 172.16.0.0/22; } }`

B. protocols { ospf { area 0.0.0.1 { nssa { area-range 172.16.0.0/22; } } } }

C. protocols { ospf { area 0.0.0.1 { stub summaries; } } }

D. protocols { ospf { area 0.0.0.1 { nssa; area-range 172.16.0.0/22 restrict; } } }

Correct Answer: B

QUESTION 5

What is the primary purpose of the LLDP-MED?

A. It learns the MAC address of the peer device.

B. It communicates the provisioned VLAN ID to the peer device.

C. It eliminates the need for a spanning tree.

D. It authenticates the peer device.

Correct Answer: B
