- A. Virtual IP (VIP) is available.
- B. It supports up to two devices.
- C. It supports up to four devices.
- D. External load balancing is preferred.

Correct Answer: CD

QUESTION 3

Which two server instances would be used as secondary authentication servers on the Junos Pulse Secure Access Service? (Choose two.)

- A. RADIUS server
- B. anonymous server
- C. Active Directory server
- D. certificate server

Correct Answer: AC

QUESTION 4

You must plan the deployment of Junos Pulse to hundreds of end users on various client platforms including Windows laptops, smartphones running Google Android, and iPad users. What are three delivery methods that you would use to complete this task? (Choose three.)

- A. Users can connect to the Secure Access Gateway Web portal and install Junos Pulse from the start page.
- B. You can distribute a default installer to endpoints, install it, and let users create their own connections.
- C. You can configure a Host Checker policy to detect if Junos Pulse is installed and deliver the installation to the endpoint during pre-authentication.
- D. Smartphone users can download the Junos Pulse installer from the mobile application section of the Web portal start page.
- E. You can create an .msi installer that contains connection settings and services along with the Junos Pulse installer and deliver this to endpoints using a software distribution process.

Correct Answer: ABE

QUESTION 5

You must create a self-signed certificate during an initial install. What information must you provide? (Choose two.)

- A. public key
- B. certificate signing request
- C. common name
- D. organization name

Correct Answer: CD
