### QUESTION 1

```
-- Exhibit -user@switch>show dot1x interface ge-0/0/1 detail ge-0/0/1.0 Role: Authenticator Administrative state: Auto
Supplicant mode: Multiple Number of retries: 3 Quiet period: 60 seconds Transmit period: 30 seconds Mac Radius:
Enabled Mac Radius Restrict: Enabled Reauthentication: Disabled Configured Reauthentication interval: 3600 seconds
Supplicant timeout: 30 seconds Server timeout: 30 seconds Maximum EAPOL requests: 2 Guest VLAN member:
Number of connected supplicants: 0 -- Exhibit -
```

Click the Exhibit button.

You are asked to troubleshoot an access control issue on your EX Series switch. The user connecting through port ge-0/0/1 indicates that their 802.1X supplicant is failing authentication and they are not able to connect to the network.

Referring to the exhibit, what is causing the 802.1X supplicant to fail?

- A. The supplicant mode is defined as multiple.
- B. The MAC restrict option is configured.
- C. The supplicant timeout value is set too low.
- D. The reauthentication interval is set too high.

Correct Answer: B

---

### QUESTION 2

You are troubleshooting a problem where an OSPF adjacency between two neighboring routers will not form.

What are two reasons for this problem? (Choose two.)

- A. One or both of the connected interfaces are missing the family inet statement.
- B. One or both of the connected interfaces are missing the family iso statement.
- C. The connected interfaces are not on the same subnet.
- D. Another IGP is running on one or both of the routers, overriding OSPF.

Correct Answer: BD

---

### QUESTION 3

```
-- Exhibit -policy-statement test_route_filter {
term 1 {
from {
```

```
route-filter 192.168.0.0/16 longer;  
  
route-filter 192.168.1.0/24 longer {  
  
metric 5;  
  
accept;  
  
}  
  
route-filter 192.168.0.0/8 orlonger accept;  
  
}  
  
then {  
  
metric 10;  
  
accept;  
  
}  
  
}  
  
term 2 {  
  
then {  
  
metric 20;  
  
accept;  
  
}  
  
}  
  
}
```

-- Exhibit -

Click the Exhibit button.

Given test route 192.168.1.0/24 and the configuration shown in the exhibit, what is the expected result?

- A. accepted with metric of 5
- B. accepted with metric of 10
- C. accepted with metric of 20
- D. rejected

Correct Answer: C

---

#### QUESTION 4

Your Layer 2 network uses VLAN IDs 100 through 400 and you are required to load-balance these VLANs between two different root bridges. You are currently using the default RSTP settings and notice that all VLANs are using the same root bridge.

How do you ensure the VLANs are load-balanced between two root bridges?

- A. Configure MSTP with two MSTI regions and split the VLAN range between them.
- B. Configure VSTP with two VLAN groups and split the VLAN range between them.
- C. Configure two RSTP instances and split the VLAN range between them.
- D. Configure STP and RSTP and split the VLAN range between them.

Correct Answer: A

#### QUESTION 5

The exhibit shows the BGP configuration for a router. The router should be receiving an identical set of prefixes over its two peering sessions. You want to ensure the router is using both routes for forwarding. Which command will show this information?

```
protocols {  
  bgp {  
    group isps {  
      peer-as 13090194;  
      multipath multiple-as;  
      neighbor 1.2.3.4;  
      neighbor 4.3.2.1;  
    }  
  }  
}
```

- A. show bgp neighbor
- B. show route forwarding-table
- C. show route protocol bgp
- D. show route receive-protocol bgp

Correct Answer: B
