QUESTION 4

Which three steps should be taken when troubleshooting a "stale nfs file handle" response to a NFS mount request on a Solaris system? (Choose three)

- A. check the client's fstab
- B. check the /etc/sd.conf file on the client
- C. check show mount -e to the storage system from the client
- D. check for connectivity to the storage system from the client
- E. check the output of the exportfs command on the storage system

Correct Answer: ADE

The fstab file reflects the defined filesystem mount paths (including NFS mounts). Always check network connectivity when a problem arises with a network service. The exportfs command will display the active exports on the storage system.
