QUESTION 1

When using MetroCluster, identify two methods for restricting access to the disaster site node. (Choose 2)

A. Use manual fencing

B. Turn off power to the disaster site node.

C. Use thecf forcetakeover-d command.

D. Use thecfgiveback-f command.

Correct Answer: AB

QUESTION 2

What is the maximum distance between a standard clustered pair?

A. 10 meters

B. 50 meters

C. 100 meters

D. 500 meters

Correct Answer: D

QUESTION 3

Five minutes ago, you performed a single file SnapRestore on a large NFS file. 40% of your NFS users are now complaining about getting "stale file handles" for the file. Which one of the following is the most likely cause of this problem, and the best procedure to correct it?

A. These users are on a different subnet from the others. Start troubleshooting by checking their subnet.

B. After a single fileSnapRestore, NFS users have to reboot their systems. Have them reboot their systems.

C. This might be due to an NFS storage appliance and client versionmis-match. Check to see that these users have the same version of the NFS client that existed at the time the snapshot was taken.

D. NFS users who try to access a reverted file without first reopening it might get a "stale file handle" error message. Have the users try to reopen the file and see if the problem is resolved.

Correct Answer: D

QUESTION 4

The snapvault update command is only available on the secondary system.

A. True

B. False

Correct Answer: A

QUESTION 5
