- A. joins
- B. forks
- C. merges
- D. decisions
- E. initial nodes
- F. flow final nodes
- G. activity final nodes

Correct Answer: F

QUESTION 2

What does a run-to-completion processing for state machines mean?

- A. The executions of orthogonal regions are serialized.
- B. Interrupts are disabled while the state machine is running.
- C. No other event will be processed until the current event is fully processed.
- D. The thread executing the state machine cannot be pre-empted by the scheduler.

Correct Answer: C

QUESTION 3

What does a structured node contain? (Choose two)

- A. edges
- B. states
- C. nodes

- D. lifelines
- E. classes
- F. messages

Correct Answer: AC

QUESTION 4

What is true of outgoing transitions from a fork pseudostate?

- A. may have guards
- B. are mutually exclusive
- C. are taken serially in arbitrary order
- D. must terminate in different regions of a state
- E. can only exist if the object is declared concurrent

Correct Answer: D

QUESTION 5

What is true for an exit action of a state?

- A. occurs when final substate is reached
- B. occurs after the "do" action of a state completes
- C. is executed before the exit actions of any containing states
- D. will be bypassed if a transition on a containing state is triggered

Correct Answer: C
