QUESTION 1

Which of the following set of databases can be valid "replication sources" for CDC?

A. DB2, Oracle, Informix and SQL Server

B. DB2, Oracle, Teradata and SQL Server

C. DB2, DataStage, IMS and IDMS

D. DB2, DataStage, Informix and MySQL

Correct Answer: A

QUESTION 2

What is the correct order of steps to follow when creating a replication subscription using the Management Console?

A. create instance, create project, create user, assign user to the project, and create subscription

B. create instance, create database, create user, assign user to the database, and create subscription

C. create instance, create user, assign user to instance, and create subscription

D. create instance, create user, create datastore, assign user to the datastore, and create subscription

Correct Answer: D

QUESTION 3

The default port number 10101 assigned to Access Server is _____.

A. a fixed value pre-assigned by the software that can never be changed

B. a fixed value assigned by users at the time of installing the software

C. automatically assigned based on the license key

D. updatable by editing the Management Console properties

Correct Answer: D

QUESTION 4

What happens when a new CDC subscription is created while database logging is turned off at the source?

A. The CDC instance cannot be connected

B. The datastore cannot be created or connected

C. The subscription that uses the source datastore cannot be created

D. When the subscription is started using the Management Console, the replication will not succeed.

Correct Answer: D

QUESTION 5

Which of the following products is capable of replicating data from supported data sources to DB2 on z/OS?

A. InfoSphere Replication Server for Linux for z Series

B. InfoSphere Classic Replication Server for z/OS

C. InfoSphere Change Data Capture (CDC) for z/OS

D. All of the above.

Correct Answer: D
