QUESTION 1

Consider the scenario where two members, "M1" and "M2", intend to update two different rows on the same data page: 1."M1" is doing an update on row R1 within a data page. It is granted exclusive access to the page containing that row of data. 2."M2" requires an exclusive lock to the same page to update row R2. It passes this request to the cluster caching facility. "M2" waits while the request is processed. 3.The cluster caching facility sees that member "M1" already has an exclusive access to the page. It issues a request to "M1" for the page. In the meantime, "M2" waits. 4."M1" processes the request by writing the page back to the global buffer pool and then releasing the page lock. ("M1" retains any row or table locks it might have had). 5.The cluster caching facility grants "M2" access to the page. "M2" reads the page from the global buffer pool to perform whatever operations for which the page is needed. Which of the following DB2 pureScale monitoring elements can be used to monitor the above scenario?

- A. Lock escalation.
- B. Lock contention.
- C. Log Retain.
- D. Page reclaiming.

Correct Answer: D

QUESTION 2

Which of the following options is TRUE about the Row and Column Access Control (RCAC) feature?

- A. Users with DATAACCESS authority are exempt from the Row and Column Access Control rules.
- B. Table data is protected against direct access to the table. Access using views is unrestricted.
- C. In order to take advantage of this feature, applications must be changed to work with the RCAC feature.
- D. Row and column level access control allows the creation of column masks that can control what column values a user is permitted to see.

Correct Answer: D

QUESTION 3

Which of the following is NOT valid state for the Cluster Caching Facility?

- A. ONLINE
- B. PRIMARY
- C. ERROR
- D. PEER

Correct Answer: A

QUESTION 4

A database administrator executed a db2iupdt command in order to drop a cluster caching facility from a DB2 pureScale cluster. Which command can be used to verify that the cluster caching facility is no longer part of the cluster?

- A. db2instance -display -cluster -modifications
- B. db2instance -list -cfs -details
- C. db2instance -all -cfs
- D. db2instance -list

Correct Answer: D

QUESTION 5

With respect to DB2 security, what is authorization?

- A. Authorization is a process that checks whether you have sufficient privileges to perform the desired database operation.
- B. Authorization is the process where the DBA gathers information to see who will have access to the database.
- C. Authorization is the process where the DB2 database checks with Windows security to see if you have access to the DB2 database.
- D. Authorization is a process that validates that you are who you claim to be by verifying your user ID and password.

Correct Answer: A
