QUESTION 1

Select two statements that the command below DOES NOT do. Note: $ is the command prompt. $ pg_dump -b -F c b > d

A. Backs up the "b" database to the "c" file, and stores error messages to the "d" file.

B. Backs up the "b" database to the "d" file.

C. Backs up large objects.

D. Backs up the "c" database to the "d" file as the "c" user.

E. Creates a backup, which is restorable with the pg_restore command.

Correct Answer: AD

QUESTION 2

Select one incorrect statement about the SQL COPY command.

A. It copies data between a file and a table.

B. You can output the row data of a table to a specified client side file.

C. Copies row data from a file into a table.

D. Only the superuser can specify the output file name.

E. The delimiter that separates column data can be changed from the default TAB character.

Correct Answer: B

QUESTION 3

Select two incorrect statements concerning the system catalog.

A. It stores the object definition information for tables and columns.

B. There may be changes to specification by major version upgrades.

C. It is accessible as a table; however, it is output in binary format so it can not be read as is.

D. It stores the internal information of the database management system.

E. It is defined based on the standard SQL specification.

Correct Answer: CE

QUESTION 4

Select two suitable statements regarding a postmaster process.

A. A postmaster process waits for client connection requests.

B. A postmaster process receives and processes database queries.

C. A postmaster process creates a child process which processes the given queries.

D. A postmaster process collects statistical information.

E. A postmaster process is created for each client connection.

Correct Answer: AC

QUESTION 5

You want to set a constraint so that the "item_id" in the "sales" table will always have a value that already

exists as "id" in the "item_master" table. Select the correct SQL statement to fill in the underlined blank of

the "sales" table. Definitions:

CREATE TABLE item_master (id INTEGER PRIMARY KEY, name TEXT);

CREATE TABLE sales (sales_id INTEGER, item_id INTEGER, num INTEGER,

);

A. FOREIGN KEY (id) REFERENCES item_master (item_id)

B. FOREIGN KEY (item_id) REFERENCES item_master (id)

C. REFERENCES item_master (item_id)

D. REFERENCES item_master (id)

E. REFERENCES item_master (id) TO item_id

Correct Answer: B
