-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

What factors will have the most significant affect on the amount of wireless bandwidth available to each station within a BSS? (Choose two)

- A. The number of client stations associated to the BSS
- B. The power management settings in the access point's beacons
- C. The presence of co-located (10m away) access points on non-overlapping channels
- D. The data rates at which nearby client stations are transmitting and receiving data
- E. The layer 3 protocol used by each station to transmit data over the wireless link

Correct Answer: AD

QUESTION 2

In addition to throughput enhancements, what other improvements does 802.11n provide when compared with 802.11a/g? (Choose 2)

- A. Introduces "fast transition" roaming protocols for VoWiFi phones
- B. Better link reliability between 802.11a/b/g client devices and 802.11n APs
- C. Improves service quality for real-time applications at greater distances
- D. Increases in receive sensitivity enhance RTLS location accuracy
- E. Stronger security with more robust encryption modes.

Correct Answer: BC

QUESTION 3

What statement about 802.11 WLAN performance is true?

- A. Use of larger frame sizes results in greater throughput in low interference environments.
- B. BSS support for 65 KB A-MPDUs will increase the maximum data rate available to client devices.
- C. In 802.11n, changing the security mechanism from WPA2-Personal to WPA2-Enterprise will enable the HT MCS rates.
- D. Compared to an Independent BSS, an Infrastructure BSS can provide almost twice the throughput between wireless nodes.
- E. Use of short guard intervals improves reliability and throughput in high multipath environments

Correct Answer: A

QUESTION 4

What statements describe industry practices for communication protocols between WLAN controllers and controller-based APs? (Choose two)

- A. All vendors use the same protocol so that APs will interoperate with WLAN controllers from other vendors.
- B. Some vendors use proprietary protocols, and some vendors use protocols based on public standards like RFCs.
- C. For most vendors, the controller-based APs maintain data and control tunnels with at least two controllers for immediate failover and redundancy.
- D. All vendors support at least one L2 or L3 broadcast protocol for controller discovery by controller-based APs.
- E. All vendors recommend using L2 (instead of L3) controller discovery and tunneling protocols in large enterprises.

Correct Answer: BD

QUESTION 5

In an 802.11n WLAN with a heterogeneous set of associated client devices including 802.11b, 11g, and 11n, what HT protection mode will the BSS use?

- A. Mode 0: No protection mode (Greenfield)
- B. Mode 1: Nonmember protection mode
- C. Mode 2: 20 MHz protection mode
- D. Mode 3: Non-HT mixed mode

Correct Answer: D
