QUESTION 1

A user attempts a remote SSH connection to a newly-installed ESXi 5.x host to execute some commands. The SSH connection attempt fails, though the user is able to receive a ICMP ping back from the host. What must the administrator do to enable SSH? (Choose two.)

- A. Enable root logon on the ESXi server.
- B. Open the SSH port on the ESXi firewall.
- C. Start the SSH service on the ESXi server.
- D. Create a local user on the ESXi server.

Correct Answer: BC

QUESTION 2

How can virtual machines be moved between datacenters?

- A. High-Availability failover
- B. Cold migration
- C. vMotion migration
- D. Storage vMotion migration

Correct Answer: B

QUESTION 3

What tool can an administrator use to determine if an existing environment is ready for Fault Tolerance?

- A. Fault Tolerance Map
- B. VMware SiteSurvey Tool
- C. VMware Cluster Analyzer
- D. VMware Capacity Planner

Correct Answer: B

QUESTION 4

An administrator is configuring a vNetwork Standard Switch for load balancing. The physical network is configured for switch-assisted load balancing using EtherChannel. Which load- balancing policy must be used to support this configuration?

- A. Route based on source MAC hash
- B. Route based on IP hash
- C. Route based on the originating port ID
- D. Route using Round-Robin

Correct Answer: B

QUESTION 5

Which resource management technique can be used to relieve a network bottleneck caused by a virtual machine with occasional high outbound network activity?

- A. Convert the switch from a vSphere Standard Switch to a vSphere Distributed Switch.
- B. Create a new port group for the virtual machine and enable traffic shaping.
- C. Apply traffic shaping to the other virtual machines in the same port group.
- D. Apply traffic shaping to the virtual machine with high activity.

Correct Answer: B
