QUESTION 1

Click the Exhibit button. What does the graph in the exhibit indicate?

- A. The average amount of read and write latency from the ESXi host to the SAN.
- B. The average amount of read and write latency from the guest operating system to the virtual machine virtual disk file.
- C. The average amount of read and write latency from the ESXi host to the datastore.
- D. The average amount of read and write latency from the cluster to the datastore.

Correct Answer: C

QUESTION 2

An administrator receives a call indicating users reported extremely slow access to virtual machines the previous evening. Access to virtual machines performs as expected as checked by the administrator. Over the course of several days, the administrator continues to receive calls about the issue, which appears to occur at intermittent times each evening.

Which step can be taken to collect information about the issue?

- A. Create a condition alarm to alert when Datastore Disk Usage (*) exceeds 70%
- B. Collect esxtop performance data in batch mode and analyze total number of I/O operations (CMDS/s) metrics
- C. Create an event alarm to alert when a storage device is disconnected
- D. Collect esxtop performance data in batch mode and analyze average device latency (DAVG/cm-d) metrics.

Correct Answer: D

QUESTION 3

Under which two conditions can vStorage APIs for Array Integration (VAAI) provide a performance benefit? (Choose two.)

- A. When a virtual disk has VMDK files stored on an NFS datastore.
- B. When a virtual disk is created using the New Virtual Machine wizard.
- C. When cloning a virtual machine with snapshots.
- D. When a virtual disk is deleted.

Correct Answer: AD

QUESTION 4

An administrator notices that the database virtual machines fail to backup within the backup window. Each database virtual machine has 4 vCPUs, 16GB RAM and 12 virtual disks. There are 16 database virtual machines to backup using 8 backup jobs. Which is the simplest way to improve the backup performance for these virtual machines?

- A. Add a backup job for each virtual machine.
- B. Set a 16GB reservation for each virtual machine.
- C. Add 1MB VMDK drives at 1.0, 2.0 and 3.0 on the vDR appliance.
- D. Upgrade the array to 8GB FCP and ensure multipathing is configured properly.

Correct Answer: C

QUESTION 5

Which two components can be installed in monitored virtual machines to trigger vSphere HA Application Monitoring? (Choose two.)

- A. A custom script utilizing the appmonitor executable
- B. The vSphere Fault Tolerant agent
- C. Third-party utilities such as Neverfail or ApplicationHA
- D. The vSphere HA application agent

Correct Answer: AD
