QUESTION 1

When an explicit failover order has been configured on a virtual switch with multiple uplinks, what determines which uplink is used when a failover event occurs?

- A. The first available uplink that reports a positive link state
- B. The reported uptime for the surviving uplinks
- C. The next available uplink on the list
- D. The uplink with the shortest route

Correct Answer: C

QUESTION 2

A user has permissions to create and manage alarms and tasks for a group of virtual machines. What happens if an administrator modifies permissions for the user so that they can no longer manage alarms?

- A. The user can no longer create alarms, but can modify or delete the existing alarms.
- B. The user can create alarms but can no longer modify or delete alarms.
- C. The user can no longer create, modify or delete alarms.
- D. The Alarms tab is dimmed in the vSphere Client and no alarm-related actions may be taken by the user.

Correct Answer: B

QUESTION 3

An administrator is setting up vMotion in a vSphere environment. A migration is run to test the configuration, but fails. What could the administrator do to resolve the issue?

- A. Ensure the VMkernel port group is configured for Management Traffic.
- B. Enable VMkernel port group for the vSphere cluster.
- C. Ensure the vMotion enabled adaptors configured for the same subnet.
- D. Use a vDS instead of a standard switch.

Correct Answer: C

QUESTION 4

An administrator is creating a vSphere Standard Switch with virtual machine and VMkernel networking. The administrator has two uplinks attached to the switch and wants to make sure multiple sessions for a virtual machine can

utilize both uplinks. Which load-balancing policy will guarantee this requirement is met, even if additional management or virtual machine traffic is added to the switch in the future?

- A. Route based on IP hash
- B. Route based on source MAC hash
- C. Route based on the originating port ID
- D. Use explicit failover.

Correct Answer: A

QUESTION 5

What is the size of a virtual machine .vswp file if defaults are accepted for the virtual machine reservations, limits, and shares?

- A. The virtual machine. vswp file is equal to twice the amount of available memory configured for the virtual machine when it was created.
- B. The virtual machine. vswp file is equal to the amount of virtual memory (virtual machine available memory, plus virtual machine overhead the virtual machine when it was created.
- C. The virtual machine. vswp file is equal to zero length when the virtual machine is created and expands as necessary
- D. The virtual machine. vswp file is equal to the amount of available memory configured for the virtual machine when it was created.

Correct Answer: D
