### QUESTION 1

A vSphere administrator upgrades a version 5.1.0 vSphere Distributed Switch to version 5.5.0. Another vSphere administrator, unaware of this change, tries to add an ESXi version

5.1.0 host to the switch and fails.

What is causing this addition of the ESXi host to fail?

- A. The upgraded switch supports version 5.5 ESXi hosts only.
- B. The upgraded switch must be set up for backwards compatibility.
- C. The switch failed to upgrade properly.
- D. A version 5.5 ESXi host must be added to the switch before the 5.1 host.

Correct Answer: A

---

### QUESTION 2

An administrator needs to use vSphere Update Manager to perform orchestrated upgrades of ESXi hosts and virtual machines. The vSphere management components reside in a secure environment that does not have direct access to the Internet.

How would Update Manager be configured in this environment while maintaining the organization's security requirements?

- A. Install Update Manager Download Service on a machine with Internet access and configure an export policy to the Update Manager server.
- B. Install Update Manager Secure Gateway on a machine in the DMZ and configure an IPsec tunnel to the internal Update Manager server.
- C. Create a TFTP server as an HTTP proxy and configure an export policy to the Update Manager server.
- D. Enable gateway services on the Update Manager server and provide Internet access to the gateway address.

Correct Answer: A

---

### QUESTION 3

An administrator is creating a vApp for a multi-tiered application and needs to configure custom startup actions for each virtual machine. What should the administrator do to enable this functionality?

- A. Verify that VMware Tools is installed on each virtual machine in the vApp.

- B. Ensure all virtual machines in the vApp are running hardware version 8 or later.
- C. Configure custom startup actions on the virtual machines, then add them to the vApp.
- D. Deploy a vSphere Management Assistant in the cluster and enable the vApp plug-in.

Correct Answer: A

---

#### QUESTION 4

The administrator has deployed a third-party virtual appliance in the organization's vSphere environment and needs to use Update Manager to maintain the third-party appliance. How should the administrator accomplish this task with the least administrative effort?

- A. Add a new Download Source to Update Manager to obtain updates from the third party
- B. Manually download the third-party updates to Update Manager, which will then apply them to the appliance
- C. Obtain an update tool from the third party and use it to manage updates to the appliance
- D. Identify the third-party appliance from the supported list within Update Manager

Correct Answer: A

---

#### QUESTION 5

What is a characteristic of Virtual SAN?

- A. It supports Virtual Machine Storage Policies.
- B. It supports multiple Virtual SAN clusters for each host.
- C. It supports native snapshots and SE Sparse disks.
- D. It supports storage attached through USB, Fibre Channel, or iSCSI.

Correct Answer: A
