QUESTION 2

Anti-DDoS is one of the major features in Alibaba Cloud Security Service. Many websites have experienced different types of DDoS attacks, an accurate understanding of DDoS is crucial to protecting websites. Which of the following descriptions about DDoS attack is the most accurate one?

- A. The main target for DDoS attack is the database.
- B. DDoS attack will try to crack the password through a large number of attempts.
- C. The main purpose of DDoS attack is to make the target server unable to provide service normally, which is one of the network attacks that are most difficult to defend.
- D. The purpose of DDoS attack is to steal confidential information.

Correct Answer: C

QUESTION 3

Alibaba Cloud does not support Intranet communication between products that are not in the same region, which does not mean _____?

- A. ECS instances in different regions cannot communicate with each other on the intranet.
- B. ECS instances and other products in different regions, such as ApsaraDB for RDS and OSS instances, cannot communicate with each other on the intranet.
- C. Server Load Balancer cannot be deployed for ECS instances in various regions.
- D. Server Load Balancer can be deployed for ECS instances in various regions.

Correct Answer: B

QUESTION 4

Cloud disks are reliable because they use _____ to provide block-level data storage for ECS instances, ensuring 99.9999999% data reliability.

- A. a distributed file management system with 3 redundant copies
- B. a file system
- C. a double copy distributed system
- D. a Linux file system

Correct Answer: A

An ECS disk can be used jointly or separately to meet the requirements of different application scenarios. ECS disks are categorized into ephemeral SSD disks and cloud disks. Compared with ephemeral SSD disks, cloud disks are more reliable as they use a triplicate distributed system to provide block-level data storage for ECS instances, ensuring 99.9999999% data reliability.
