QUESTION 1

The Arista MLAG domain ID is:

- A. a text string configured in each peer switch
- B. a serial number tied to the chassis of the master switch
- C. the secret password into the local speakeasy
- D. a pseudorandom number generated by the on board atomic clock

Correct Answer: A

QUESTION 2

What is the benefit of the watch diff CLI command?

- A. It allows you to watch differential equation algorithms when they're being evaluated in a hadoop cluster.
- B. It allows you to view the skew rate between two clock sources when using NTP.
- C. It allows you to view the skew rate between two clock sources when using IEEE 1588 Precision Time Protocol.
- D. It allows you to automatically reissue any CLI command at set intervals while highlighting the differences from the last iteration of that command.

Correct Answer: D

QUESTION 3

When configuring MLAG, Arista recommends that the trunk group command be used on the VLAN used for MLAG peer communication.

What is the purpose of the trunk group command?

- A. It groups all the trunks together so that they can traverse the peer-link properly.
- B. It groups the MLAG interfaces together so that they can be reported on both peers.
- C. It prevents the configured VLAN from leaking out onto other trunks.
- D. It ensures that the configured VLAN will be included on all trunks.

Correct Answer: A

QUESTION 4

How is LANZ enabled on switches that support it?

- A. With the management lanz command, followed by the no shutdown command.
- B. With the queue-monitor enable command.
- C. With the lanz enable command.
- D. With the queue-monitor length command.

Correct Answer: D

QUESTION 5

What does %1 signify when writing an alias statement in CLI?

- A. It means that Arista is number one.
- B. %1 is a placeholder that will be replaced with token 1 when the alias is called.
- C. It doesn't mean anything.
- D. %1 means that the CPU is limited to 1% when the alias is called.

Correct Answer: B
