T/F: During cardiac arrest, sodium bicarbonate should be administered every 5 minutes to prevent metabolic acidosis.

- A. True
- B. False

Correct Answer: B

QUESTION 5

SIMULATION

How does the trachea in an adult and child differ?

A. Infants and children have narrower tracheas that are obstructed more easily by swelling, and the trachea is also softer and more flexible. The cricoid cartilage is less developed and less rigid, and is the narrowest portion of the child's airway.

Correct Answer: A
