QUESTION 1

Where can JavaScript be stored and run from?

- A. The classpath only.
- B. The presentation tier only.
- C. The repository.
- D. The repository and the classpath.

Correct Answer: C

The Repository JavaScript API lets you develop JavaScript (ECMAScript) 1.6 compatible files to access, modify, and create repository objects such as nodes, aspects, and properties.

QUESTION 2

Considering to be the root folder of the Alfresco Content Services installation, which steps do you need to execute to deploy a simple module that extends the repository? (Choose two.)

- A. Copy the JAR extension to /modules/platform.
- B. Copy the AMP extension to /amps.
- C. Apply the AMP extension using /bin/apply_amps.sh
- D. Apply the JAR extension using /bin/apply_jars.sh
- E. Restart Alfresco.

Correct Answer: AE

QUESTION 3

Which of the following correctly describes the behavior of CMIS properties?

- A. Properties can be single or multi-valued.
- B. Properties can be shared between objects.
- C. Properties are untyped.
- D. Properties are explicitly ordered.

Correct Answer: B

QUESTION 4

You have been tasked to develop a solution that will notify an external system when updates are made to certain documents. These documents can be of any type and the content authors will make the decision if the document needs this "notification" functionality. Select the simplest combination steps that will implement this solution.

- A. Define a new "notify" aspect with a "multi" peer association. Create and register a policy behavior that, when content is updated, users can associate their content via this aspect. As associations are being made, the external notification request will be triggered.
- B. Define a new "notify" aspect with no properties. Create and register a policy behavior that, if this aspect is present, will make the external notification request. Users can simply add this aspect to their content item.
- C. Extend cm:content to provide an additional "notify" property. Create a policy behavior that will look at the "notify" property and, if set, make the external notification request. Users simply create cm:content items.
- D. Extend sys:base to provide an additional "notify" property. Create a new policy that will look at the "notify" property and, if set, make the external notification request. Users can simply call an action against their content item.

Correct Answer: A

QUESTION 5

Which one of the following steps is necessary when customizing the "Advanced Search" in Share and adding a date property to the search form?

- A. The date range control needs to be specified in share-config-custom.xml.
- B. A Java-backed web script to deal with dates needs to be created and referenced in share-configcustom.xml.
- C. Share will automatically provide a date range control for dates.
- D. A date range control needs to be created in FreeMarker, then specified in share-config-custom.xml.

Correct Answer: A
