### QUESTION 1

According to Adobe best practices, how should a DevOps Engineer tailor the OSGi service configurations depending on the type of environment?

- A. Leverage configuration files in runmode dedicated folder
- B. Leverage multiple content packages for each environment
- C. Use environment variables to identify the instance and environment type, then load the appropriate configuration files accordingly
- D. Provide default configuration in the content package, and apply the differences using the OSGi console

Correct Answer: A

---

### QUESTION 2

In what two ways can a DevOps Engineer install a content package? (Choose two.)

- A. Store the content package in the crx-quickstart/install folder in the filesystem
- B. Store the content package in the crx-quickstart/app folder in the filesystem
- C. Use CRX Package Manager
- D. Upload the package to /content/dam and start the InstallPackageWorkflow
- E. Upload the package through the OSGi console

Correct Answer: AC

---

#### QUESTION 4

A DevOps Engineer notices that existing pages are not updated through a package installation. The updated pages are present after deleting the pages that are not updating, and reinstalling the package.

What is the source of the problem?

- A. Install mode is set.
- B. Update mode is set.
- C. Merge mode is set.
- D. Replace mode is set.

Correct Answer: B

---

#### QUESTION 5

A DevOps Engineer must configure a production deployment pipeline. The AEM environment consists of one author instance, two publish instances, and two dispatcher instances. A load balancer and CDN are also leveraged.

In combination with load balancing, which step is required to make sure that the site is available during deployment?

- A. Point the CDN to the author instance during the publish instance deployment
- B. Perform the deployment on one publish instance at a time
- C. Clear the CDN cache after the author instance deployment
- D. Disable the replication agents during the deployment

Correct Answer: D
