QUESTION 1

A customer is about to go live with a new website on AEM on prem. The DNS (www.domam.com) already points to the load balancer of the AEM environment and final sanity checks are being performed. The website was tested in lower environments without SSL. On production, the website is served over https. During sanity testing, all requests result in a 404.

While investigating this issue, an Architect determines the following:

1.

The requests land on port 443 on the load balancer where SSL is terminated and an HTTP header X-Forwarded-Proto is set

2.

The website Sling Mapping is created beneath /etc/map/http/www.domain.com.80

3.

The URLs on the website are externalized with http in the absolute links. Which two actions should the Architect take to resolve this problem? (Choose two.)

A. Ensure the Sling Mapping exist at /etc/map/https/www.domain.com.80

B. Ensure the Sling Mapping exist at /etc/map/httpj)mwp
