### QUESTION 1

Which two unit testing dependencies are generated by AEM archetype? (Select two.)

- A. JUnit
- B. Selenium
- C. PowerMock
- D. Mockito
- E. Hobbes

Correct Answer: AD

Explanation: JUnit and Mockito are two unit testing dependencies that are generated by AEM archetype. JUnit is a framework for writing and running unit tests in Java. Mockito is a framework for creating and using mock objects in unit tests.

AEM archetype also adds Apache Sling Mocks and AEM Mocks Test Framework by io.wcm as dependencies for unit testing.

### QUESTION 2

Which AEM as a Cloud Service role can configure or run pipelines?

- A. Deployment Manager
- B. DevOps
- C. Developer
- D. Program Manager

Correct Answer: A

Explanation: The Deployment Manager is a role that can configure or run pipelines in Cloud Manager. The Deployment Manager can create and edit programs and environments, configure pipelines, start and cancel pipeline executions, and

approve or reject deployments to production. The Deployment Manager role requires an IMS ID that is associated with the Adobe Experience Cloud product profile.

### QUESTION 3

A customer adds third-party client libraries to add some features in an existing AEM application, which will significantly reduce performance.

How should the developer optimize the site?

- A. Embed client libraries to consolidate them into fewer files.
- B. Debug third-party client lib and fix the code.
- C. Rebuild Client libraries.

Correct Answer: A

Explanation: Embedding client libraries is a technique that allows combining code from multiple client libraries into a single file. This reduces the number of network requests and improves performance. Embedding client libraries can be done

by using the embed property of the cq:ClientLibraryFolder node and specifying the categories of the client libraries to be embedded.

### QUESTION 4

A client is having issues with some query results:

Many of the client's industry terms have the same meaning, and users do not always search the exact wording. Many users search by typing in short phrases instead of exact keywords, ex: "cats and dogs"

What index analyzers should the AEM developer recommend?

- A. 1. Add a Mapping filter to the current indexes
- 2. Add a Stop filter to the current indexes
- B. 1. Tokenize the current indexes with a Keyword tokenizer
- 2. Add a Mapping filter to the current indexes
- C. 1. Add a Synonym filter to the current indexes
- 2. Add a Stop filter to the current indexes
- D. 1. Add a Synonym filter to the current indexes
- 2. Add a LowerCase filter to the current indexes

Correct Answer: D

A Synonym filter can help to map different terms that have the same meaning, such as "cat" and "feline". A LowerCase filter can help to normalize the case of the terms, so that "cats and dogs" and "Cats and Dogs" are treated the same. Reference: 1 Lucene Analyzers section

### QUESTION 5

Which configuration/section should be used to resolve the domain name by dispatcher?

- A. Configuration in vhosts file
- B. Configuration in filters.any
- C. Configuration in httpd.conf
- D. Configuration in DNS

Correct Answer: D

Explanation: The configuration in DNS (Domain Name System) should be used to resolve the domain name by dispatcher. The DNS resolves the domain names to the IP address of the web server that hosts the dispatcher. The dispatcher then matches the incoming request URL with the cached files or the AEM publish instances.
