QUESTION 1

You are reviewing a third party extension for Magento Commerce Cloud compatibility.

You discover the module writes to a custom directory called `internal/` within the Magento base directory.

The directory has to be shared by all web servers.

What do you do so the module can be used on Magento Commerce Cloud?

- A. Create a symlink from `/top/internal` to the `internal/` folder
- B. Declare a shared mount for the `internal/directory` in `.magento.app.yaml`
- C. Request the vendor make the directory configurable in the Magento admin
- D. Add a patch for extension so it uses the subdirectory `var/internal/` instead

Correct Answer: B

QUESTION 2

Exploring the Production environment you find `mysql_use_slave_connection` is enabled. What is the purpose of this setting?

- A. To split the database tables between the three Production servers and improve performance
- B. To enable fault tolerance on the MySQL cluster
- C. To utilize the read-only slave servers and improve the overall performance
- D. To allow database backups from a MySQL slave server with minimal impact on the Production site

Correct Answer: C

QUESTION 3

Your company decided to move a Magento store to a subdomain `https://shop.coinpany.ccm/` and redirect traffic from the old URL `http://company.com/` to the new one. Your company is using the Starter plan.

How do you implement the redirect?

- A. Configure a rewrite rule in the `.htaccess` file in the `pub` folder
- B. Submit a support ticket to add the redirect on the web-server level
- C. Add a route using the `MANGENTO_CLOUD_ROUTES` environment variable.
- D. Add a route into the `.magento/routes.yaml` configuration file

Correct Answer: D

QUESTION 4

After deploying to Staging for the first time with the Fastly module installed, you notice that Fastly is not caching pages. Page caching works properly in a local development environment.

What two steps are required to make Fastly cache pages? Choose 2 answers

- A. Activate the module by setting Caching Application to Fastly CDN.
- B. Connect the Fastly shield using the Shield setting in the Magento admin.
- C. Enable the Fastly connection by running `magento-Cloud fastly:setup`.
- D. Populate VCL in Fastly by clicking on Upload VCL to Fastly in the Magento admin.

Correct Answer: AD

QUESTION 5

You created a custom module that is not functioning as expected on your Integration environment. You would like to debug the code using Xdebug. Xdebug is missing from the output of the command `php -m`.

What are two ways to load the Xdebug module? Choose 2 answers

- A. Create a custom `php.ini` that includes the extension
- B. You log a support request as php modules can only be installed by support
- C. Add xdebug into the `.magento.app.yaml` file under the extensions section
- D. In the `phpserver` folder, create a folder `conf-d` and add a file `ext-xdebug.ini` that includes the extension

Correct Answer: BC
