- A. Change the log level in the log:email section of the .magento.env.yaml file
- B. Update the SPF record in the DNS
- C. Look In the var/log directory for the mail. log file
- D. Move the test to the Staging environment

Correct Answer: D

---

### QUESTION 3

You want to improve the ability to monitor Production deployments by setting up an email notification system.

How do you achieve this?

- A. Enable Deployment Notifications under Configure Environment > Settings in the Protect Web
- B. Build a custom module which hooks into the deployment phase and sends emails in real-time
- C. Configure log notifications in the .magento.env.yaml file
- D. Use the magento-cloud environment:deploy:email command to enable email notifications

---

Correct Answer: B

---

#### QUESTION 4

A project has a Magento cron job implemented to export new order data to a file. This process can also be triggered by a custombin/magento command. The functionality uses a lock file in var/locks to prevent concurrent execution.

There are instances when the process gets locked after Production deployments and order data is not exported.

How do you prevent this from happening\\'?

- A. Use the vas\_iocks\_clear variable available for the post\_deploy stage in the .magento. env. yaml file
- B. Write a custom post\_deploy hook to delete orphan lock tiles and include it in the .magento.app.yaml file
- C. Use the var\_locks\_clear variable available for the build stage In the . magento. app. yaml file
- D. You must access the Production environment and delete the lock file

Correct Answer: B

---

#### QUESTION 5

You need to disable a module on a Magento Commerce 2 3 Cloud project and remove its database tables The module usesthe declarative schema system to manage its database changes.

Which action do you take?

- A. Run bin/magento module: disable MyCompany\_MyModule on the local environment and then commit and deploy the app/etc/config.php file
- B. Run bin/magento module:disable MyCompany\_MyModule on the production environment and download and commit the app/etc/config.php file
- C. Delete the module from the git repository leaving the record in app/etc/config.php Intact and deploy the changes
- D. Remove the module line from the app/etc/config.php file on the local environment and then deploy the file

Correct Answer: A
